This deeply researched history of sustainable design standards in building codes explores how public policy, standard-setting trade associations, and financial incentives influence the ways in which the construction of our homes impacts the environment. The Greening of America's Building Codes investigates the regulations and economic incentives meant to control the environmental impact of contemporary construction practices as it analyzes the history of residential building codes. The book exposes

More relevant than ever, *The Greening of America's Building Codes* is a valuable tool for architects, architecture students, builders, real estate developers, and homeowners who want to understand how public policy and their own day-to-day decisions impact the environment.
