Kondratieff Waves, Warfare and World Security Tessaleno C. Devezas 2006 "Considerable progress has been made in understanding the underlying mechanisms driving the long-wave behavior of the world socioeconomic development. In spite of this progress one recognizes that many aspects related with these underlying driving forces remained unsolved. One of these aspects endured, perhaps as the most controversial one: the close relationship between K-waves and the outbreak of major wars. Social scientists and politicians are well acquainted with the fact that chance events have been responsible for the outbreak of wars and their course and outcome. Two main trends are now acknowledged: the increasing recognition of the existence of some cyclical patterns of warfare involving the core of the world system, and a shift toward newly evolving patterns involving non-state actors and asymmetric warfare. We may tentatively agree that wars are not merely the result of blind social and political forces, but patterned according to long socioeconomic cycles and the result of deep and general laws underlying the co-evolutionary unfolding of the world system. In the first part of this book, the reader will find a mix of contributions dealing with new visions or revisions of the concept of long waves considered from very different perspectives related to their unfolding. Those contributions discussing the issue of K-waves and their relation with military conflicts objectively, following old and / or new conceptualizations of the phenomenon, were selected to form the books second part. Finally those contributions with strong emphasis on the analysis of future scenarios, related or not related with warfare and / or world security compose the body of the third part."

Selected Topics from Neurochemistry Neville N. Osborne 2013-10-22 This book contains up-dated versions of articles which proved very popular when first published in Neurochemistry International. The articles draw attention to developments in a specific field perhaps unfamiliar to the reader, collating observations from a wide area which seem to point in a new direction, giving the author's personal view on a controversial topic, or directing soundly based criticism at some widely held dogma or widely used technique in the neurosciences.

Thermodynamic Modeling and Materials Data Engineering J.-P. Caliste 2012-12-06 J.-P. CALISTE, A. TRUYOL AND J. WESTBROOK The Series, "Data and Knowledge in a Changing World", exemplifies CODATA's primary purpose of collecting, from widely different fields, a wealth of information on efficient exploitation of data for progress in science and technology and making that information available to scientists and engineers. A separate and complementary CODATA Reference Series will present Directories of compiled and evaluated data and Glossaries of data-related terms. The present book "Thermodynamic Modeling and Materials Data Engineering" discusses thermodynamic, structural, systemic and heuristic approaches to the modeling of complex materials behavior in condensed phases, both fluids and solids, in order to evaluate their potential applications. It was inspired by the Symposium on "Materials and Structural Properties" held during the 14th International CODATA Conference in Chambéry, France. The quality of the contributions to this Symposium motivated us to present "a coherent book of interest to the field. Updated contributions inspired by Symposium discussions and selections from other CODATA workshops concerning material properties data and Computer Aided Design combine to highlight the complexity of material data issues on experimental, theoretical and simulation levels Articles were selected for their pertinence in three areas. Complex data leading to interesting developments and tools such as: • new developments in state equations and their applications, • prediction and validation of physical and energy data by group correlations for pure compounds, • modeling and prediction of mixture properties.

Fuzziness Monika Fuxreiter 2012-03-07 Detailed characterization of fuzzy interactions will be of central importance for understanding the diverse biological functions of intrinsically disordered proteins in complex eukaryotic signaling networks. In this volume, Peter Tompa and Monika Fuxreiter have assembled a series of papers that address the issue of fuzziness in molecular interactions. These papers provide a broad overview of the phenomenon of fuzziness and provide compelling examples of the central role played by fuzzy interactions in regulation of cellular signaling processes and in viral infectivity. These contributions summarize the current state of knowledge in this new field and will undoubtedly stimulate future research that will further advance our understanding of fuzziness and its role in biomolecular interactions.

Reuse and Recycling of Lithium-Ion Power Batteries Guangjin Zhao 2017-05-16 A comprehensive guide to the reuse and recycling of lithium-ion power batteries—fundamental concepts, relevant technologies, and

business models Reuse and Recycling of Lithium-Ion Power Batteries explores ways in which retired lithium ion batteries (LIBs) can create long-term, stable profits within a well-designed business operation. Based on a large volume of experimental data collected in the author's lab, it demonstrates how LIBs reuse can effectively cut the cost of Electric Vehicles (EVs) by extending the service lifetime of the batteries. In addition to the cost benefits, Dr. Guangjin Zhao discusses how recycling and reuse can significantly reduce environmental and safety hazards, thus complying with the core principles of environment protection: recycle, reuse and reduce. Offering coverage of both the fundamental theory and applied technologies involved in LIB reuse and recycling, the book's contents are based on the simulated and experimental results of a hybrid micro-grid demonstration project and recycling system. In the opening section on battery reuse, Dr. Zhao introduces key concepts, including battery dismantling, sorting, second life prediction, re-packing, system integration and relevant technologies. He then builds on that foundation to explore advanced topics, such as resource recovery, harmless treatment, secondary pollution control, and zero emissions technologies. Reuse and Recycling of Lithium-Ion Power Batteries: • Provides timely, in-depth coverage of both the reuse and recycling aspects of lithium-ion batteries • Is based on extensive simulation and experimental research performed by the author, as well as an extensive review of the current literature on the subject • Discusses the full range of critical issues, from battery dismantling and sorting to secondary pollution control and zero emissions technologies • Includes business models and strategies for secondary use and recycling of power lithium-ion batteries Reuse and Recycling of Lithium-Ion Power Batteries is an indispensable resource for researchers, engineers, and business professionals who work in industries involved in energy storage systems and battery recycling, especially with the manufacture and use (and reuse) of lithium-ion batteries. It is also a valuable supplementary text for advanced undergraduates and postgraduate students studying energy storage, battery recycling, and battery management.

Fundamentals of Airline Marketing Scott Ambrose 2021-05-28 Applying fundamentals of marketing to commercial passenger air transportation, this textbook puts the emphasis on marketing principles and illustrative ways in which airlines can distinguish themselves within the highly competitive global marketplace. Fundamentals of Airline Marketing begins with a survey of current airline business strategies and the macro forces that have shaped the airline industry in the past and will continue to do so in the future. The growing importance of technology is discussed both from the perspective of better understanding customer needs and engaging more effectively with them. The central role of the "customer" is explored through the lens of modern segmentation and branding approaches. Coverage then shifts to the tactical decision areas consisting of the 4Ps—product, place, promotion, and price—in which marketers shape and execute their strategies. The book concludes with a focus on executing marketing initiatives internally through customer-facing employee groups and externally through the measurement and management of the customer experience. Fundamentals of Airline Marketing: • is an accessible textbook on the fundamentals of marketing for commercial passenger air transportation; • chronicles the marketing innovations and controversies that have been central to the historic shift in airline fortunes; • demonstrates how airline decisions fit within the fundamentals of marketing and how the marketplace is continuing to evolve; • provides a bridge between key marketing principles and their specific application to the airline industry in each chapter. This textbook is written primarily for undergraduate college students enrolled in aviation business administration programs and related courses. It will also serve as an accessible primer on airline marketing for industry professionals not presently working in marketing and for frontline airline employees seeking to learn more about marketing.

Lipoprotein Metabolism and Atherogenesis T. Kita 2012-02-25 Atherosclerosis leading to coronary heart disease and to cerebrovascular disorders is the number one cause of death in industrialized societies. For the last two decades, great advances have been made in understanding the pathogenesis of those disorders. Recent studies have revealed that the earliest event in atherogenesis is the adhesion of circulating leukocytes to the vascular endothelial cells and their migration into the subendothelial space. These cells are known to play a central role in the formation of a fatty streak consisting of lipid-laden foam cells. As pathological events continue, the lesion is converted to a more fibrous lesion associated with vascular smooth muscle cells. To solve the enigma of this complicated process, intensive studies in molecular biology have disclosed the genes involved in those events. Some of the genes have been verified by creation of novel animal models, which have led to novel therapeutic strategies for subjects with atherosclerosis. This volume contains papers presented at the International Symposium on Lipoprotein Metabolism and Atherogenesis held in Kyoto December 5-8, 1998, supported in part by the Japan Intractable Diseases Research Foundation. The following three topics were the focus of the three-day program: 1) The molecular approach to studying risk factors and prevention 2) The creation of novel animal models 3) Lipoprotein disorder as a cause of activation of vascular endothelial cells. Thirty distinguished researchers from the United States, the United Kingdom, Austria, Finland, Australia, and Japan were invited.

As we gain more qualitative and quantitative information of complex intracellular processes, biochemical modeling and simulation become indispensable not only to uncover the molecular mechanisms of the processes, but to perform useful predictions. To this end, the E-Cell System, a multi-algorithm, multi-timescale object-oriented simulation platform, can be used to construct predictive virtual biological systems. Gene regulatory and biochemical networks that constitute a sub- or a whole cellular system can be constructed using the E-Cell System to perform qualitative and quantitative analyses. The purpose of E-Cell System: Basic Concepts and Applications is to provide a comprehensive guide for the E-Cell System version 3 in terms of the software features and its usage. While the publicly available E-Cell Simulation Environment version 3 User's Manual provides the technical details of model building and scripting, it does not describe some of the underlying concepts of the E-Cell System. The first part of the book addresses this issue by providing the basic concepts of modeling and simulation with the E-Cell System.

Decision Making with the Analytic Network Process Thomas L. Saaty 2013-05-14 The Analytic Network Process (ANP), developed by Thomas Saaty in his work on multicriteria decision making, applies network structures with dependence and feedback to complex decision making. This new edition of Decision Making with the Analytic Network Process is a selection of the latest applications of ANP to economic, social and political decisions, and also to technological design. The ANP is a methodological tool that is helpful to organize knowledge and thinking, elicit judgments registered in both in memory and in feelings, quantify the judgments and derive priorities from them, and finally synthesize these diverse priorities into a single mathematically and logically justifiable overall outcome. In the process of deriving this outcome, the ANP also allows for the representation and synthesis of diverse opinions in the midst of discussion and debate. The book focuses on the application of the ANP in three different areas: economics, the social sciences and the linking of measurement with human values. Economists can use the ANP for an alternate approach for dealing with economic problems than the usual mathematical models on which economics bases its quantitative thinking. For psychologists, sociologists and political scientists, the ANP offers the methodology they have sought for some time to quantify and derive measurements for intangibles. Finally the book applies the ANP to provide people in the physical and engineering sciences with a quantitative method to link hard measurement to human values. In such a process, one is able to interpret the true meaning of measurements made on a uniform scale using a unit.

Sleep Disorders and Sleep Deprivation Institute of Medicine 2006-10-13 Clinical practice related to sleep problems and sleep disorders has been expanding rapidly in the last few years, but scientific research is not keeping pace. Sleep apnea, insomnia, and restless legs syndrome are three examples of very common disorders for which we have little biological information. This new book cuts across a variety of medical

disciplines such as neurology, pulmonology, pediatrics, internal medicine, psychiatry, psychology, otolaryngology, and nursing, as well as other medical practices with an interest in the management of sleep pathology. This area of research is not limited to very young and old patients—sleep disorders reach across all ages and ethnicities. Sleep Disorders and Sleep Deprivation presents a structured analysis that explores the following: Improving awareness among the general public and health care professionals. Increasing investment in interdisciplinary somnology and sleep medicine research training and mentoring activities. Validating and developing new and existing technologies for diagnosis and treatment. This book will be of interest to those looking to learn more about the enormous public health burden of sleep disorders and sleep deprivation and the strikingly limited capacity of the health care enterprise to identify and treat the majority of individuals suffering from sleep problems.
