Judaea J. T. Milik 2009-10-01 J. T. MILIK was a Polish priest who, after brilliant studies in Rome, worked in Jerusalem from 1952, first at the *École Biblique et Archéologique Française*, and later in connection with the *Centre National de la Recherche Scientifique*. He took part in the exploration of the Qumran. From the beginning, he collaborated in the work of publication. With Father D. Barthélemy he published the fragments from Cave I, Qumran Cave I (Discoveries in the Judaean Desert), Oxford 1955; he was the most active member of the international team, which prepared for publication the considerable collection from Cave IV. The fragments from Cave V and the copper rolls from Cave III were entrusted to him. He would eventually publish the Hebrew and Aramaic documents from Murabba'at; he published some fragments from Hirbet Mird and from unidentified caves in the south. He had been given direct access to all the documents still unpublished, which were kept together in the Palestine Archaeological Museum in Jerusalem. In short, this work was written by a specialist who knew better than anyone the places and documents of which he spoke.

Part Two, "Aids in Battle," provides you these essential resources: • Teaching about spiritual warfare from Scripture and Church documents • Scripture verses for battle • Wisdom and inspiration from saints who fought Satan • Prayers for protection, deliverance, and victory • Rosary meditations, hymns, and other devotions for spiritual combat St. Paul urges us to "fight the good fight of the faith" (1 Tim 6:12). Take this Manual for

Spiritual Warfare with you into battle. The beautiful Premium UltraSoft gift edition features sewn binding, ribbon marker and silver edges. Visual Basic for DOS Namir C. Coal Combustion and Gasification L. Douglas Smoot 2013-11-11 The use of coal is required to help satisfy the world's energy needs. Yet coal is a difficult fossil fuel to consume efficiently and cleanly. We believe that its clean and efficient use can be increased through improved technology based on a thorough understanding of fundamental physical and chemical processes that occur during consumption. The principal objective of this book is to provide a current summary of this technology. The past technology for describing and analyzing coal furnaces and combustors has relied largely on empirical inputs for the complex flow and chemical reactions that occur while more formally treating the heat-transfer effects. Growing concern over control of combustion-generated air pollutants revealed a lack of understanding of the relevant fundamental physical and chemical mechanisms. Recent technical advances in computer speed and storage capacity, and in numerical prediction of recirculating turbulent flows, two-phase flows, and flows with chemical reaction have opened new opportunities for describing and modeling such complex combustion systems in greater detail. We believe that most of the requisite component models to permit a more fundamental description of coal combustion processes are available. At the same time there is worldwide interest in the use of coal, and progress in modeling of coal reaction processes has been steady.

The Massorah Christian D. Ginsburg 200? Pulverized-Coal Combustion and Gasification L. Smoot 2013-04-17 viii and approaches could be adapted to other coal conversion and combustion problems, we have not considered

combustion or gasification in fluidized or fixed beds or in situ processes. In addition, we have not considered other fossil-fuel combustion problems associated with oil shale, tar sands, etc., even though many aspects of pulverized-coal combustion would relate to these problems. For the case of pulverized-coal models, we have attempted to provide a detailed description of the model foundations. Parts I and II of this book emphasize general principles for describing reacting, turbulent or laminar, multiphase systems. General conservation equations are developed and summarized. The basis for computing thermochemical equilibrium in complex, heterogeneous mixtures is presented, together with techniques for rapid computation and reference to required input data. Rate processes are then discussed, including pertinent aspects of turbulence, chemical kinetics, radiative heat transfer, and gas-particle convective-diffusive interactions. Much of Part II deals with parameters and coefficients for describing these complex rate processes. This part of the book provides recommended values of coefficients and parameters for treating complex reacting flows. Parts I and II may well be suitable for use in an advanced course in reacting flows, and have been written partly with that in mind. Part III deals with more specific aspects of pulverized-coal characteristics and rate processes. Following a general description of coal structure and constitution, coal pyrolysis and char oxidation processes are considered.

Empathy And Agency Hans Herbert Kogler 2018-03-08
A crucial debate currently raging in the fields of cognitive and social science centers around general and specific approaches to understanding the actions of others. When we understand the actions of another person, do we do so on the basis of a general theory of psychology, or on the basis of an effort to place ourselves in the particular position of that specific person? Hans Herbert Kögler and Karsten R. Stueber's *Empathy and Agency* addresses this other issues vital to current social science in an advanced and diverse analysis of the foundations of social-scientific methodology based on recent cognitive psychology. The book serves as both an introduction to the debate for non-academic audiences and as a catalyst for further discussion for serious theorists. *Empathy and Agency* provides a solid foundation of the fundamental issues in social and cognitive science, but also presents the most influential paradigms in the field at this time.
