Traumatic Brain Injury Rehabilitation Christine Lefavre 2014-08-07 The Lefavre Rainbow Effect is a groundbreaking treatment for those suffering from a traumatic brain injury (TBI). This strategy is different from most others because it is individually designed for each client and focuses on the cognitive retraining of the brain based on pre-injury lifestyle as well as the organic damage to the brain, rather than the disability alone. Starting in the community, after the acute and in-patient rehabilitation phases of recovery have been completed, the Lefavre Rainbow Effect maximizes the recovery process by positioning the TBI survivor to be a motivated participant in the arduous journey of recovery. Key features: Provides tools and templates for managing the individualized treatment and integration process, including additional material available for download Addresses physical, emotional, and cognitive deficits with a strong influence on participation in life activities Includes the unique theory of the traumatically induced dysfunctional family, with the aim to preserve the family unit and reduce the overall loss for the survivor of brain injury Features a practical approach, including chapter summaries, case studies, diagrams, and templates Offers guidance on producing an Independent Medical Evaluation and preparing effectively for cross examination in recognition of the adversarial aspect of many TBI cases This essential text demonstrates how rehabilitation professionals, including occupational therapists, doctors, nurses, social workers, speech pathologists, and neuropsychologists, can use the Lefavre Rainbow Effect in their practices to improve therapeutic outcomes for their clients.

Homeostatic Control of Brain Function Detlev Boison 2016 Homeostatic Control of Brain Function offers a broad view of brain health and diverse perspectives for potential treatments, targeting key areas such as mitochondria, the immune system, epigenetic changes, and regulatory molecules such as ions, neuropeptides, and neuromodulators.

Loss of homeostasis becomes expressed as a diverse array of neurological disorders. Each disorder has multiple comorbidities - with some crossing over several conditions - and often disease-specific treatments remain elusive. When current pharmacological therapies result in ineffective and inadequate outcomes, therapies to restore and maintain homeostatic functions can help improve brain health, no matter the diagnosis. Employing homeostatic therapies may lead to future cures or treatments that address multiple comorbidities. In an age where brain diseases such as Alzheimer's or Parkinson's are ever present, the incorporation of homeostatic techniques could successfully promote better overall brain health. Key Features include · A focus on the homeostatic controls that significantly depend on the way one lives, eats, and drinks. · Highlights from emerging research in non-pharmaceutical therapies including botanical medications, meditation, diet, and exercise. · Incorporation of homeostatic therapies into existing basic and clinical research paradigms. · Extensive scientific basic and clinical research ranging from molecules to disorders. · Emerging practical information for improving homeostasis. · Examples of homeostatic therapies in preventing and delaying dysfunction. Both editors, Detlev Boison and Susan Masino, bring their unique expertise in homeostatic research to the overall scope of this work. This book is accessible to all with an interest in brain health; scientist, clinician, student, and lay reader alike.

Reversibility of Chronic Disease and Hypersensitivity, Volume 3 William J. Rea 2014-09-26 Encyclopedic in scope, Reversibility of Chronic Degenerative Disease and Hypersensitivity, Volume 3: Environmental Manifestations of the Neurocardiovascular Systems draws deeply from clinical histories of thousands of patients. It focuses on clinical syndromes within the musculoskeletal, neurological, and cardiovascular systems with a special focus on vascular dysfunction and heart failure treatment. The book explores mechanisms of chemical sensitivity and chronic degenerative disease, their manifestations, diagnosis, and approaches to reverse dysfunction. It covers a wide variety of topics including environmental sensitivity due to external pollutants, environmental control for reducing total body load, pollutant damage to vascular perfusion, altered blood volume, fluctuations of oxygen extraction, effects of endocrine on the vascular system, effects of pollutants on myocardial cells, and mechanisms in vascular damage. The book also discusses in detail a wide variety of clinical manifestations including vasculitis, cardiac arrhythmias, cardiac metabolic syndrome, myocarditis, atherosclerosis, heart failure, urticaria, and anaphylaxis. Treatment for heart failure is also discussed. The third volume of a five-volume set, the book provides an essential resource for health care providers diagnosing and treating chemical sensitivity and chronic degenerative disease.

Concepts of Biology Samantha Fowler 2018-01-07 Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology

is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Reversibility of Chronic Degenerative Disease and Hypersensitivity, Volume 1 William J. Rea 2010-06-18 The clinical approaches to the chronic degenerative diseases that drain our resources, and compromise our well-being, have become almost exclusively symptom-focused. The common wisdom is that they are idiopathic with final outcomes to be managed rather than prevented or cured. That they are potentially reversible rarely enters into any discussion between doctor and patient. A Homeostatic approach to Cure and Prevention for Researchers and Clinicians Working in Toxicology, Immunology, Neurology, and Internal Medicine Reversibility of Chronic Degenerative Disease and Hypersensitivity, a four-part encyclopedia, offers a much different perspective on chronic degenerative disease, one that disputes the idiopathic label attached to most, as well as the usual fatalistic prognosis. The first volume, Regulating Mechanisms of Chemical Sensitivity, demonstrates that one aspect common to chronic diseases is the disruption of systemic and cellular homeostasis. Environmental pollutants play a large role, along with the contributions of genetic and life style factors, in disrupting the self-regulating mechanisms built into our normally adaptive cells. "As dyshomeostasis develops in the nervous system, causes should be found and removed before the metabolic-induced tissue changes take place and cause autonomous, irreversible fixed-named diseases to occur. ...Single and multiple chemicals in various doses either individually and/or in combinations can cause individual or multiorgan dysfunction of the endocrine system. The astute clinician must be aware of these factors in order to help the patient with hypersensitivity and/or chronic degenerative disease." Chapter 2 Drawing on a vast amount of data and clinical cases attended to by the authors in their own medical practices, this volume examines the complex relation that environmental pollution has with chronic degenerative diseases. It considers its impact on the body's vast communication networks and what excessive overload does to homeostatic mechanisms. The authors factor in both general and specific environmental loads and how they alter and trigger genetic and non-genetic responses. Volume 1 begins with an overview of the physiologic basis of homeostasis, exploring various ways that the body deals with toxins and the networks it uses to communicate news of assault and makes provisions for adaptation. The text delves into the connective tissue matrix and considers vascular, neural, endocrine, and immune system responses to a variety of noxious assaults. "Both innate and acquired immunity can be and are altered in individuals with chemical sensitivity and chronic degenerative disease. ...With pollutant overload changes can occur in the lymphatic channels, the lymph nodes, and lymph node egress as well as the lymphatic cells. Changes in mucosal function and the effects of the autonomic nervous system are evident with environmental pollutant overload." Chapter 3 Written by two very knowledgeable clinicians, it brings together research of the highest caliber and provides extensive discussions involving sophisticated biochemical, endocrine, and neural science. The text provides clinicians with the knowledge to understand the triggering and processes of degenerative diseases, so that they might develop more efficient treatment and prevention plans. The book also supplies the knowledge and perspective that can lead research to more effective treatments. "The ground regulation system consisting of the connective tissue matrix, fibroblast, macrophages, mast cell, leukocyte, end capillary vessel and autonomic nerves, is a global information system for regulating the dynamics of homeostasis in the body. ...One's knowledge of this process must be the guide to move through the onset of early end-stage disease and, eventually, see the manifestations to fixed-named autonomous diseases. It is this knowledge that offers us the greatest potential ... for preventing and reversing early homeostatic dysfunction." Chapter 1

The Leviathan Factor Lawrence E. Burkholder 2017-01-12 *The Leviathan Factor* tells the incredible story of how Satan, created as Lucifer the morning star, self-transformed into Leviathan, God's serpentine arch foe. When he tried to achieve immortality by tweaking creation's lowest-level laws (a sophisticated computer/automaton) he created death instead. As the serpent he reappeared in the Genesis tree of good and evil, where he seduced humans to attempt immortality apart from covenant with God. Leviathan is responsible for the false belief that we each have an inner divine spark which, when reconnected to our ego, awakens our true inherent divinity. Unfortunately he and his demonic spirits also impact our minds, bodies, and environment as psi. A few of the many markers of these demonic psi are levitation, telepathy, telekinesis, deja vu, emotional oppressions, poltergeist activities, past lives' "memories," voices and visions, near death and out-of-body experiences, and trance channeling. Many of these psi phenomena are co-factors in mind disorders such as schizophrenia or epilepsy. Manifestations in Christian circles include false tongues and "holy" laughter. *The Leviathan Factor* is not a healing how-to. It is the first book to place demonic evil into the context of creation's basic structures and laws.
