## **Advances in Near Infrared Spectroscopy and Related Computational Methods**

Christian Huck 2020-01-03 In the last few decades, near-infrared (NIR) spectroscopy has distinguished itself as one of the most rapidly advancing spectroscopic techniques. Mainly known as an analytical tool useful for sample characterization and content quantification, NIR spectroscopy is essential in various other fields, e.g. NIR imaging techniques in biophotonics, medical applications or used for characterization of food products. Its contribution in basic science and physical chemistry should be noted as well, e.g. in exploration of the nature of molecular vibrations or intermolecular interactions. One of the current development trends involves the miniaturization and simplification of instrumentation, creating prospects for the spread of NIR spectrometers at a consumer level in the form of smartphone attachments—a breakthrough not yet accomplished by any other analytical technique. A growing diversity in the related methods and applications has led to a dispersion of these contributions among disparate scientific communities. The aim of this Special Issue was to bring together the communities that may perceive NIR spectroscopy from different perspectives. It resulted in 30 contributions presenting the latest advances in the methodologies essential in near-infrared spectroscopy in a variety of applications.

## **Kinetics of Chemical Processes**

Michel Boudart 2014-05-16 Kinetics of Chemical

Processes details the concepts associated with the kinetic study of the chemical processes. The book is comprised of 10 chapters that present information relevant to applied research. The text first covers the elementary chemical kinetics of elementary steps, and then proceeds to discussing catalysis. The next chapter tackles simplified kinetics of sequences at the steady state. Chapter 5 deals with coupled sequences in reaction networks, while Chapter 6 talks about autocatalysis and inhibition. The seventh chapter describes the irreducible transport phenomena in chemical kinetics. The next two chapters discuss the correlations in homogenous kinetics and heterogeneous catalysis, respectively. The last chapter covers the analysis of reaction networks. The book will be of great use to students, researchers, and practitioners of scientific disciplines that deal with chemical reaction, particularly chemistry and chemical engineering.

## U.S. Marines In Vietnam: The Bitter End, 1973-1975

Maj. George Ross Dunham 2016-08-09 This publication represents the ninth volume in an operational and chronological series covering the Marine Corps' participation in the Vietnam War. This particular volume details the final chapter in the Corps' involvement in South-East Asia, including chapters on Cambodia, the refugees, and the recovery of the container ship SS Mayaguez. Although largely written from the perspective of the III Marine Amphibious Force, this volume also describes the roles of the two joint commands operating in the region: the Defense Attaché Office, Saigon, and the United States

Support Activities Group, Thailand. Thus, while the volume emphasizes the Marine Corps' role in the events of the period, significant attention also is given to the overall contribution of these commands in executing U.S. policy in South-east Asia from 1973 to 1975. Additionally, a chapter is devoted to the Marine Corps' role in assisting thousands of refugees who fled South Vietnam in the final weeks of that nation's existence.

Recent developments are brought to light in detail, and there are new sections on the improvement of barrier properties of polymers, constitutive equations for polymer melts, additive manufacturing and polymer recycling. This textbook is aimed at senior undergraduate students and first year graduate students in polymer engineering and science courses, as well as professional engineers, scientists, and chemists. Examples and problems are included at the end of each chapter for concept reinforcement.

**The B-29 Superfortress Chronology, 1934-1960** Robert A. Mann 2010-01-19 The Boeing B-29 Superfortress lived an operational life of only 26 years, but what a life it was. The introduction to this book provides basic information on the physical plane: dimensions, specs, leading particulars and operational usages. Then an exhaustive day-by-day

chronology of the B-29 is presented—from the earliest designs in 1934 through thousands of missions and aircraft events in World War II and Korea to the 1960 retirement of the last operational B-29. The book also includes an extensive glossary and three appendices, which provide a discussion of the general anatomy of a mission, a sample of operational voice or radio codes used in 1945, and a guide to (very unofficial) aircraft names.

**Cement Replacement Materials** Ali Akbar Ramezaniapour 2013-09-24 The aim of this book is to present the latest findings in the properties and application of Supplementary Cementing Materials and blended cements currently used in the world in concrete. Sustainability is an important issue all over the world. Carbon dioxide emission has been a serious problem in the world due to the greenhouse effect. Today many countries agreed

to reduce the emission of CO<sub>2</sub>. Many phases of cement and concrete technology can affect sustainability. Cement and concrete industry is responsible for the production of 7% carbon dioxide of the total world CO<sub>2</sub> emission. The use of supplementary cementing materials (SCM), design of concrete mixtures with optimum content of cement and enhancement of concrete durability are the main issues towards sustainability in concrete industry.

*Bullying in Schools* Ken Rigby 2007 Bullying is now widely recognised as a serious problem that affects many children in schools. It can take many forms, including direct verbal and physical harassment and indirect forms such as deliberate exclusion and the targeting of individuals using cyber technology. Continual and severe bullying can cause both short term and long term damage, making it difficult for victims to form intimate relationships with others and for habitual bullies to avoid following a delinquent lifestyle and becoming perpetrators of domestic violence. Even though this type of abuse affects many of our school children, Ken Rigby believes there are grounds for optimism. This passionate and motivating book shows that

there are ways of reducing the likelihood of bullying occurring in a school and effective ways of tackling cases when they do occur. Using up-to-date studies, *Bullying in Schools* helps us to understand the nature of bullying and why it so often takes place in schools. Importantly, it examines and evaluates what schools can do to promote more positive peer relationships within the school community and take effective and sustainable action to deal with problems that may arise. Teachers, parents, school leaders, policy makers, and health professionals will find it invaluable and empowering.

**National Accident Sampling System 1981 Election 2007** R.J. May 2013-09-23 Papua New Guinea's general election in 2007 attracted particular interest for several reasons. Not only did it follow what was widely acknowledged as the country's worst election ever, in 2002 (in which elections in six of the country's 109 electorates were declared to be 'failed elections'), it was the first general election to be held under a new limited preferential voting system. It also followed the first full parliamentary term under the Organic Law on the Integrity of Political Parties and Candidates, which had been introduced in 2001 in an attempt to strengthen political parties and create a greater degree of stability in the national parliament, and was the first to embrace a 'whole-of-government' approach to electoral administration, through an Interdepartmental Electoral Committee. This volume provides an analysis of the 2007 election, drawing on the work of a domestic monitoring team organized through the National Research Institute, and several visiting scholars. It addresses key issues such as voter education, electoral administration, election security, the role of political parties, women as candidates and voters, the shift to limited preferential voting, and HIV transmission, and provides detailed accounts of the election in a number of open and provincial electorates. It is generally agreed that the election of 2007 was an improvement on that of 2002. But problems of electoral administration and voting behaviour remain. These are identified in this volume, and recommendations made for electoral reform.

**Structural Vibration** C. Beards 1996-05-31 Many structures suffer from unwanted

vibrations and, although careful analysis at the design stage can minimise these, the vibration levels of many structures are excessive. In this book the entire range of methods of control, both by damping and by excitation, is described in a single volume. Clear and concise descriptions are given of the techniques for mathematically modelling real structures so that the equations which describe the motion of such structures can be derived. This approach leads to a comprehensive discussion of the analysis of typical models of vibrating structures excited by a range of periodic and random inputs. Careful consideration is also given to the sources of excitation, both internal and external, and the effects of isolation and transmissibility. A major part of the book is devoted to damping of structures and many sources of damping are considered, as are the ways of changing damping using both active and passive methods. The numerous worked examples liberally distributed throughout the text, amplify and clarify the theoretical analysis presented. Particular attention is paid to the meaning and interpretation of results, further enhancing the scope and applications of analysis. Over 80 problems are included with answers and worked solutions to most. This book provides engineering students, designers and professional engineers with a detailed insight into the principles involved in the analysis and damping of structural vibration while presenting a sound theoretical basis for further study. Suitable for students of engineering to first degree level and for designers and practising engineers. Numerous worked examples. Clear and easy to follow.

**Trench Art** Jane A. Kimball 2004 "Trench art" is a highly evocative term conjuring up the image of a mud-spattered soldier in a soggy trench hammering out a souvenir for a loved one at home while dodging bullets and artillery shells. This is an appealing but very false conception of the reality of this art form. A few types of trench art could be made easily in a trench during lulls in the fighting, but the hammering involved in making many trench art pieces would have been greeted with unwelcome hostile fire from the enemy. Trench art items made during wars were in fact created at a distance from the front line trenches either by soldiers "at rest" behind the

front lines, by skilled artisans among the civilian population, by prisoners of war, or by soldiers.

**Grid and Distributed Computing, Control and Automation** Stephen S. Yau 2010-11-23 Welcome to the proceedings of the 2010 International Conferences on Grid and Distributed Computing (GDC 2010), and Control and Automation (CA 2010) - two of the partnering events of the Second International Mega-Conference on Future Generation Information Technology (FGIT 2010). GDC and CA bring together researchers from academia and industry as well as practitioners to share ideas, problems and solutions relating to the multifaceted aspects of high-performance and compound control systems, including their links to computational sciences, mathematics and information technology. In total, 1,630 papers were submitted to FGIT 2010 from 30 countries, which includes 198 papers submitted to GDC/CA 2010. The submitted papers went through a rigorous reviewing process: 395 of the 1,630 papers were accepted for FGIT 2010, while 40 papers were accepted for GDC/CA 2010. Of the 40 papers, 8 were selected for the special FGIT 2010 volume published by Springer in LNCS the series. 28 papers are published in this volume, and 4 papers were withdrawn due to technical reasons. We would like to acknowledge the great effort of the GDC/CA 2010 International Advisory Boards and members of the International Program Committees, as well as all the organizations and individuals who supported the idea of publishing this volume of proceedings, including SERSC and Springer. Also, the success of these two conferences would not have been possible without the huge support from our sponsors and the work of the Chairs and Organizing Committee.

**When the Russians Blink** John M. Young 2014-01-16 Surprisingly very little has been written about the military response to the Cuban Missile Crisis. The author, a major in the U.S. Marine Corps Reserve, has obtained the declassification of many formerly top secret operations plans and command diaries of U.S. Navy and Marine Corps units which, in less than a week, formed the core of a massive quarantine and planned invasion force that was larger than

the Allied invasion force on D-Day. This paper traces the history of the United States' relationship with Cuba and our response to the discovery of nuclear missiles there targeted at our homeland. The naval planning for a Cuban contingency is analyzed through its actual implementation with the assistance of maps, intelligence reports, and troop deployments. The probable effect of the invasion plans on Soviet leaders and an assessment of the effects that the Crisis continues to have on US. policy toward Latin America are also discussed.

**Kontum** Thomas P. McKenna 2011-09-09 In the spring of 1972, North Vietnam invaded South Vietnam in what became known as the Easter Offensive. Almost all of the American forces had already withdrawn from Vietnam except for a small group of American advisers to the South Vietnamese armed forces. The 23rd ARVN Infantry Division and its American advisers were sent to defend the provincial capital of Kontum in the Central Highlands. They were surrounded and attacked by three enemy divisions with heavy artillery and tanks but, with the help of air power, managed to successfully defend Kontum and prevent South Vietnam from being cut in half and defeated. Although much has been written about the Vietnam War, little of it addresses either the Easter Offensive or the Battle of Kontum. In *Kontum: The Battle to Save South Vietnam*, Thomas P. McKenna fills this gap, offering the only in-depth account available of this violent engagement. McKenna, a U.S. infantry lieutenant colonel assigned as a military adviser to the 23rd Division, participated in the battle of Kontum and combines his personal experiences with years of interviews and research from primary sources to describe the events leading up to the invasion and the battle itself. *Kontum* sheds new light on the actions of U.S. advisers in combat during the Vietnam War. McKenna's book is not only an essential historical resource for America's most controversial war but a personal story of valor and survival.

This new edition features own web site that features real heat transfer problems from industry, as well as actual case studies.

**Principles of Vibration** Benson H. Tongue 1996 Benson Tongue takes a refreshingly informal approach to the understanding and analysis of vibrations. He strikes the right balance between detail and accessibility, offering in-depth analysis and a friendly writing style. Beginning with classical subjects, e.g., single degree of freedom systems, the text moves into more modern material, emphasizing multiple degree of freedom systems. Numerous problems challenge students to think and analyze outcomes of various techniques employed. Additional modal analysis and linear algebra are incorporated to solve problems, utilizing but not requiring MATLAB. Another innovative feature of the text is a chapter devoted to "Seat of the Pants Engineering", which brings together some of the common approaches engineers use to get a quick answer or to verify an analysis. At the same time, he applies them to all the systems that have been discussed in earlier chapters. Principles of Vibration is an ideal text for upper-level undergraduate and graduate students in mechanical, civil, and aeronautical engineering departments.
