Spaces of Geographical Thought Paul Cloke 2005-02-16 Examining key ideas - like space and place - which inform the geographic imagination, this text discusses the core conceptual vocabulary of human geography.

Fifty Key Thinkers on Development David Simon 2006 The essential guide to the world's most influential development thinkers, this authoritative text presents a unique guide to the lives and ideas of leading contributors to the contested terrain of development studies. Reflecting the diverse, interdisciplinary nature of the area, the book includes entries on: * modernisers like Hirshman, Kindleberger and Rostow * dependencistas such as Frank, Cardoso and Amin * progressives like Prebisch, Helleiner and Streeten * political leaders enunciating radical alternative visions of development, such as Mao, Nkrumah and Nyerere * progenitors of religiously or spiritually inspired development, such as Gandhi and Ariyaratne * development-environment thinkers like Blaikie, Brookfield and Shiva. This is a fascinating and readable introduction to the major figures that have shaped the field, ideal for anyone studying or working in the area.

Key Thinkers on Space and Place Phil Hubbard 2010-11-12 In this latest edition of Key Thinkers on Space and Place, editors Phil Hubbard

and Rob Kitchin provide us with a fully revised and updated text that highlights the work of over 65 key thinkers on space and place. Unique in its concept, the book is a comprehensive guide to the life and work of some of the key thinkers particularly influential in the current 'spatial turn' in the social sciences. Providing a synoptic overview of different ideas about the role of space and place in contemporary social, cultural, political and economic life, each portrait comprises: Biographical information and theoretical context. An explication of their contribution to spatial thinking. An overview of key advances and controversie. Guidance on further reading. With 14 additional chapters including entries on Saskia Sassen, Tim Ingold, Cindi Katz and John Urry, the book covers ideas ranging from humanism, Marxism, feminism and post-structuralism to queer-theory, post-colonialism, globalization and deconstruction, presenting a thorough look at diverse ways in which space and place has been theorized. An essential text for geographers, this now classic reference text is for all those interested in theories of space and place, whether in geography, sociology, cultural studies, urban studies, planning, anthropology, or women's studies.

Time in Maps Kären Wigen 2020-11-20 Maps organize us in space, but they also organize us in time. Looking around the world for the last five

hundred years, *Time in Maps* shows that today's digital maps are only the latest effort to insert a sense of time into the spatial medium of maps. Historians Kären Wigen and Caroline Winterer have assembled leading scholars to consider how maps from all over the world have depicted time in ingenious and provocative ways. Focusing on maps created in Spanish America, Europe, the United States, and Asia, these essays take us from the Aztecs documenting the founding of Tenochtitlan, to early modern Japanese reconstructing nostalgic landscapes before Western encroachments, to nineteenth-century Americans grappling with the new concept of deep time. The book also features a defense of traditional paper maps by digital mapmaker William Rankin. With more than one hundred color maps and illustrations, *Time in Maps* will draw the attention of anyone interested in cartographic history.

Key Concepts in Geography Nicholas Clifford 2008-12-12 "This book clearly outlines key concepts that all geographers should readily be able to explain. It does so in a highly accessible way. It is likely to be a text that my students will return to throughout their degree." - Dr Karen Parkhill, Bangor University "The editors have done a fantastic job. This second edition is really accessible to the student and provides the key literature in the key geographical terms of scale, space, time, place and landscape." - Dr Elias Symeonakis, Manchester Metropolitan University "An excellent introductory text for accessible overviews of key concepts across human and physical geography." - Professor Patrick Devine-Wright, Exeter University Including ten new chapters on nature, globalization, development and risk, and a new section on practicing geography, this is a completely revised and updated edition of the best-selling, standard student resource. *Key Concepts in Geography* explains the key terms - space, time, place, scale, landscape - that define the language of geography. It is unique in the reference literature as it provides in one volume concepts from both human geography and physical geography. Four introductory chapters on different intellectual traditions in geography situate and introduce the entries on the key concepts. Each entry then comprises a short definition, a summary of the principal arguments, a substantive 5,000-word discussion, the use of

real-life examples, and annotated notes for further reading. Written in an accessible way by established figures in the discipline, the definitions provide thorough explanations of all the core concepts that undergraduates of geography must understand to complete their degree. **Language Learning Environments** Phil Benson 2021-06-04 This book is the first in-depth examination of the application of theories of space to issues of second language learning. The author introduces the work of key thinkers on the theory of space and place and the relevance of their ideas to second language acquisition (SLA). He also outlines a new conceptual framework and set of terms for researching SLA that centre on the idea of 'language learning environments'. The book considers the spatial contexts in which language learning takes place and investigates how these spatial contexts are transformed into individualised language learning environments, as learners engage with a range of human and nonhuman, and physical and nonphysical, resources in their daily lives. Revisiting linguistics and language learning theory from a spatial perspective, the book demonstrates that the question of where people learn languages is equally as important as that of how they do so. This work is essential reading for any researcher wishing to research the role of the environment as an active player in SLA.

Place Tim Cresswell 2013-06-05 This text introduces students of human geography to the fundamental concept of place, marrying everyday uses of the term with the complex theoretical debates that have grown up around it. A short introduction to one of the most fundamental concepts in human geography Marries everyday uses of the term "place" with the more complex theoretical debates that have grown up around it Makes the debates intelligible to students, using familiar stories as a way into more abstract ideas Excerpts and discusses key papers on place by Doreen Massey and David Harvey Considers empirical examples of ways in which the concept of place has been used in research Teaching and learning aids include an annotated bibliography, lists of key readings and texts, a survey of web resources, suggested pedagogical resources and possible student projects

For a New Geography Milton Santos 2021-11-09 For the first time in

English, a key work of critical geography Originally published in 1978 in Portuguese, *For a New Geography* is a milestone in the history of critical geography, and it marked the emergence of its author, Milton Santos (1926–2001), as a major interpreter of geographical thought, a prominent Afro-Brazilian public intellectual, and one of the foremost global theorists of space. Published in the midst of a crisis in geographical thought, *For a New Geography* functioned as a bridge between geography's past and its future. In advancing his vision of a geography of action and liberation, Santos begins by turning to the roots of modern geography and its colonial legacies. Moving from a critique of the shortcomings of geography from the field's foundations as a modern science to the outline of a new field of critical geography, he sets forth both an ontology of space and a methodology for geography. In so doing, he introduces novel theoretical categories to the analysis of space. It is, in short, both a critique of the Northern, Anglo-centric discipline from within and a systematic critique of its flaws and assumptions from outside. Critical geography has developed in the past four decades into a heterogeneous and creative field of enquiry. Though accruing a set of theoretical touchstones in the process, it has become detached from a longer and broader history of geographical thought. *For a New Geography* reconciles these divergent histories. Arriving in English at a time of renewed interest in alternative geographical traditions and the history of radical geography, it takes its place in the canonical works of critical geography.

For Space Doreen Massey 2005-03-09 Questioning the implicit assumptions that we make about space, this text considers conventional notions of social science, as well as demonstrating how a vigorous understanding of space can impact on political consequences.

Postmodern Geographies Edward W. Soja 1989 Written by one of America's foremost geographers, *Postmodern Geographies* contests the tendency, still dominant in most social science, to reduce human geography to a reflective mirror, or, as Marx called it, an "unnecessary complication." Beginning with a powerful critique of historicism and its constraining effects on the geographical imagination, Edward Soja builds

on the work of Foucault, Berger, Giddens, Berman, Jameson and, above all, Henri Lefebvre, to argue for a historical and geographical materialism, a radical rethinking of the dialectics of space, time and social being. Soja charts the respatialization of social theory from the still unfolding encounter between Western Marxism and modern geography, through the current debates on the emergence of a postfordist regime of "flexible accumulation." The postmodern geography of Los Angeles, exposed in a provocative pair of essays, serves as a model in his account of the contemporary struggle for control over the social production of space.

Key Thinkers on Cities Regan Koch 2017-05-22 The work of 40 innovative and influential thinkers are profiled in this text to provide students with an engaging introduction to and intellectual survey of those who are and have been instrumental in the way we interact with cities

Approaches to Human Geography Stuart Aitken 2006-01-06 *Approaches to Human Geography* is the essential student primer on theory and practice in human geography. It is a systematic review of the key ideas and debates informing post-war geography, explaining how those ideas work in practice. In three sections, the text provides: · A comprehensive contextualising essay: *Introducing Philosophies, People and Practices* · *Philosophies*: written by the principal proponents, easily comprehensible accounts of: *Positivist Geographies*; *Humanism*; *Feminist Geographies*; *Marxism*; *Structuration Theory*; *Behavioral Geography*; *Realism*; *Post Structuralist Theories*; *Actor-Network Theory*; and *Post Colonialism* · *People*: prominent geographers explain events that formed their ways of knowing; the section offers situated accounts of theory and practice by, for example: *David Ley*; *Linda McDowell*; and *David Harvey* · *Practices*: applied accounts of *Quantification, Evidence and Positivism*; *Geographic Information Systems*; *Humanism*; *Geography, Political Activism, and Marxism*; *the Production of Feminist Geographies*; *Poststructuralist Theory*; *Environmental Inquiry in a Postcolonial World*; *Contested Geographies* · *Student Exercises and Glossary* Avoiding jargon - while attentive to the rigor and complexity of the ideas that underlie geographic knowledge - the text is written for students who have not

met philosophical or theoretical approaches before. This is a beginning guide to geographic research and practice. Comprehensive and accessible, it will be the core text for courses on Approaches to Human Geography; Philosophy and Geography; and the History of Geography; and a key resource for students beginning research projects.

Encounters in Planning Thought Beatrix Haselsberger 2017-01-06 Encounters in Planning Thought builds on the intellectual legacy of spatial planning through essays by leading scholars from around the world, including John Friedmann, Peter Marcuse, Patsy Healey, Andreas Faludi, Judith Innes, Rachele Alterman and many more. Each author provides a fascinating and inspiring unravelling of his or her own intellectual journey in the context of events, political and economic forces, and prevailing ideas and practices, as well as their own personal lives. This is crucial reading for those interested in spatial planning, including those studying the theory and history of spatial planning. Encounters in Planning Thought sets out a comprehensive, intellectual, institutional and practical agenda for the discipline of spatial planning as it heads towards its next half-century. Together, the essays form a solid base on which to understand the most salient elements to be taken forward by current and future generations of spatial planners.

On Location Benjamin Morison 2002-02-07 *On Location* is the first book in English exclusively devoted to a highly significant doctrine in the history of philosophy and science--Aristotle's account of place in the *Physics*. The central question which Aristotle aims to answer is: What is it for something to be somewhere? Ben Morison examines how Aristotle works from simple observations about replacement to a definition of the notion of the place of a body--the inner limit of that body's surroundings. This definition lies at the heart of what we say about places, for instance when we say that we cannot be in two places at once, or that two bodies cannot be in the same place at the same time. Morison also assesses Aristotle's brilliant, though often obscure, criticisms of rival theories. This authoritative exposition and defence of Aristotle's account of place not only allows it to be properly understood in the wider context of the *Physics*, but also demonstrates that it is of enduring philosophical

interest and value.

The Politics of Space and Place Bob Brecher 2013-01-03 What might an analysis of politics which focuses on the operation of power through space and place, and on the spatial structuring of inequality, tell us about the world we make for ourselves and others? From the national border to the wire fence; from the privatisation of land to the exclusion and expulsion of persecuted peoples; questions of space and place, of who can be where and what they can do there, are at the very heart of the most important political debates of our time. Bringing together an interdisciplinary collection of authors deploying diverse perspectives and methodological approaches, this book responds to the pressing demand to reflect on and engage with some of the key questions raised by a political analysis of space and place. Its chapters chart the ways in which inequality and exclusion are played out in spatial terms, exploring the operations of power and resistance at the micro-level of the individual home and small community, analysing modes of securitisation and fortification utilised in the interests of wealth and power, and documenting the ways in which space and place are being transformed by changing socio-economic and cultural demands. As well as analysing the ways in which forms of exclusion and persecution are manifest spatially, the chapters in this book also attend to the forms of resistance and contestation which emerge in response to them. Resistance is found in the persistence of those who build and rebuild their homes and communities in a world which seems bent on their exclusion. At the same time life on the peripheries can give rise to new conceptions of citizenship and public space as well as to new political demands which seek to (re)claim space and contest the dominant order. Bringing together scholars working in fields as diverse as political science, geography, international studies, cultural anthropology, architecture, political philosophy and the visual arts, this book offers readers access to a range of contemporary case studies and theoretical perspectives. Relevant, timely and thoroughly accessible, this text offers an integrated approach to what can be a dauntingly diverse area of study and will be of interest not only to those working in fields such as architecture, political

theory and geography but also to non-specialists and students.

Key Thinkers on Space and Place Phil Hubbard 2004-05-25 A comprehensive guide to the latest work on space. Each entry is a short interpretative essay, outlining the contributions made by the key theorists.

Space and Place Yi-fu Tuan 1977

The Sociology of Space Martina Löw 2016-09-09 In this book, the author develops a relational concept of space that encompasses social structure, the material world of objects and bodies, and the symbolic dimension of the social world. Löw's guiding principle is the assumption that space emerges in the interplay between objects, structures and actions. Based on a critical discussion of classic theories of space, Löw develops a new dynamic theory of space that accounts for the relational context in which space is constituted. This innovative view on the interdependency of material, social, and symbolic dimensions of space also permits a new perspective on architecture and urban development.

Key Thinkers on Space and Place Phil Hubbard 2004

Key Texts in Human Geography Phil Hubbard 2008-05-19 "A book that will delight students... Key Texts in Human Geography is a primer of 26 interpretive essays designed to open up the subject's landmark monographs of the past 50 years to critical interpretation... The essays are uniformly excellent and the enthusiasm of the authors for the project shines through... It will find itself at the top of a thousand module handouts." - THE Textbook Guide "Will surely become a 'key text' itself. Read any chapter and you will want to compare it with another. Before you realize, an afternoon is gone and then you are tracking down the originals." - Professor James Sidaway, University of Plymouth 'An essential synopsis of essential readings that every human geographer must read. It is highly recommended for those just embarking on their careers as well as those who need a reminder of how and why geography moved from the margins of social thought to its very core.' - Barney Warf, Florida State University Undergraduate geography students are often directed to 'key' texts in the literature but find them difficult to

read because of their language and argument. As a result, they fail to get to grips with the subject matter and gravitate towards course textbooks instead. Key Texts in Human Geography serves as a primer and companion to the key texts in human geography published over the past 40 years. It is not a reader, but a volume of 26 interpretive essays highlighting: the significance of the text how the book should be read reactions and controversies surrounding the book the book's long-term legacy. It is an essential reference guide for all students of human geography and provides an invaluable interpretive tool in answering questions about human geography and what constitutes geographical knowledge.

The Production of Space Henri Lefebvre 1992-04-08 Henri Lefebvre has considerable claims to be the greatest living philosopher. His work spans some sixty years and includes original work on a diverse range of subjects, from dialectical materialism to architecture, urbanism and the experience of everyday life. The Production of Space is his major philosophical work and its translation has been long awaited by scholars in many different fields. The book is a search for a reconciliation between mental space (the space of the philosophers) and real space (the physical and social spheres in which we all live). In the course of his exploration, Henri Lefebvre moves from metaphysical and ideological considerations of the meaning of space to its experience in the everyday life of home and city. He seeks, in other words, to bridge the gap between the realms of theory and practice, between the mental and the social, and between philosophy and reality. In doing so, he ranges through art, literature, architecture and economics, and further provides a powerful antidote to the sterile and obfuscatory methods and theories characteristic of much recent continental philosophy. This is a work of great vision and incisiveness. It is also characterized by its author's wit and by anecdote, as well as by a deftness of style which Donald Nicholson-Smith's sensitive translation precisely captures.

Space in Theory Russell West-Pavlov 2009-01-01 Space in Theory: Kristeva, Foucault, Deleuze seeks to give a detailed but succinct overview of the role of spatial reflection in three of the most influential

French critical thinkers of recent decades. It proposes a step-by-step analysis of the changing place of space in their theories, focussing on the common problematic all three critics address, but highlighting the significant differences between them. It aims to rectify an unaccountable absence of detailed analysis to the significance of space in their work up until now. *Space in Theory* argues that Kristeva, Foucault and Deleuze address the question: How are meaning and knowledge produced in contemporary society? What makes it possible to speak and think in ways we take for granted? The answer which all three thinkers provide is: space. This space takes various forms: psychic, subjective space in Kristeva, power-knowledge-space in Foucault, and the spaces of life as multiple flows of becoming in Deleuze. This book alternates between analyses of these thinkers' theoretical texts, and brief digressions into literary texts by Barrico, de Beauvoir, Beckett, Bodrožić or Bonnefoy, via Borges, Forster, Gide, Gilbert, Glissant, Hall, to Kafka, Ondaatje, Proust, Sartre, Warner and Woolf. These detours through literature aim to render more concrete and accessible the highly complex conceptualization of contemporary spatial theory. This volume is aimed at students, postgraduates and researchers interested in the areas of French poststructuralist theory, spatial reflection, or more generally contemporary cultural theory and cultural studies.

Fifty Major Thinkers on Education Joy Palmer 2002-09-11 In this unique work some of today's greatest educators present concise, accessible summaries of the great educators of the past. Covering a time-span from 500 BC to the early twentieth century each essay gives key biographical information, an outline of the individual's principal achievements and activities, an assessment of their impact and influence, a list of their major writings and suggested further reading. Together with *Fifty Modern Thinkers on Education*, this book provides a unique reference guide for all students of education.

Space from Zeno to Einstein Nick Huggett 1999-04-01 Learning through original texts can be a powerful heuristic tool. This book collects a dozen classic readings that are generally accepted as the most significant contributions to the philosophy of space. The readings have

been selected both on the basis of their relevance to recent debates on the nature of space and on the extent to which they carry premonitions of contemporary physics. In his detailed commentaries, Nick Huggett weaves together the readings and links them to our modern understanding of the subject. Together the readings indicate the general historical development of the concept of space, and in his commentaries Huggett explains their logical relations. He also uses our contemporary understanding of space to help clarify the key ideas of the texts. One goal is to prepare the reader (both scientist and nonscientist) to learn and understand relativity theory, the basis of our current understanding of space. The readings are by Zeno, Plato, Aristotle, Euclid, Descartes, Newton, Leibniz, Clarke, Berkeley, Kant, Mach, Poincaré, and Einstein. *Key Thinkers in Psychology* Rom Harré 2006 It is important for every student of psychology, wherever they might be in the world, to understand the classic scholars, the classic studies, and the subsequent generations of people and ideas that have come to define the broad discipline that is 'psychology'. This book achieves this in the most accessible and engaging manner possible. Rom Harré presents a unique textbook orientation, combining the biopic with the significance of the major protagonists of the last century, organized by 'schools of thought', yet with cross-references throughout the text.

Cultural Turns Doris Bachmann-Medick 2016-01-15 This book provides a comprehensive overview of cultural turns - groundbreaking theoretical reorientations in the study of culture, the humanities and the social sciences. It features chapters on the interpretive, performative, reflexive, postcolonial, translational, spatial and iconic turns while introducing emerging developments. This translation of a revised German classic is the first synthesis of cultural turns in the English-speaking world.

Thinking Geographically Brendan Bartley 2004-10-01 *Thinking Geographically* offers students and faculty alike an elegant, concise, and thorough overview of contemporary theoretical concerns in geography. Easily accessible to those unfamiliar with social theory, this volume "pushes the envelope" of understanding by sketching the contours of post-structuralist spatial thought, including such critical emerging topics

as geographies of text, the body, money, and globalisation. Brief biographies of influential theorists demonstrate how ideas are embodied and personified. This volume is highly useful for courses in human geography, the history and status of the discipline, and will stand as a milestone in the discipline's conceptual understanding over the next decade or more." Barney Warf, Florida State University The last decade has seen Geography transformed by an astonishing range of cultural and philosophical concepts and approaches. Thinking Geographically is designed for students as an accessible and enjoyable introduction to this new landscape of geographical ideas. The book takes the reader through the history of geographic thought up to a survey of the present.

Contemporary theory is then used to explore real world issues drawn from across the discipline of social, cultural, political and economic geography. Entertainingly written and packed with examples and with profiles of key theorists, the book is an ideal introduction for any student who wants to discover the potential of thinking geographically.

Key Thinkers on Space and Place Phil Hubbard 2010-12-08 Already a standard student reference, all the entries in this second edition of *Key Thinkers on Space and Place* have been substantially revised and updated. Recognizing how active and vigorous debates on space are, this edition includes ten completely new entries, making the text even more comprehensive. It is a unique guide to the life and work of those thinkers most responsible for the current 'spatial turn' in the social sciences. Highlighting the work of more than 60 key thinkers it provides a synoptic overview of different ideas about the role of space and place in contemporary social, cultural, political and economic life. With concise, uniform entries throughout, the portrait of each thinker comprises: - biographical information and theoretical context - an explication of their contribution to spatial thinking - an overview of key advances and controversies - bibliographies of primary and secondary literature As a primer on the spatial imagination, the text illustrates the diverse ways that space and place can be theorized: from humanism to Marxism, feminism to post-structuralism, queer theory to post-colonialism. The book will be an indispensable purchase not just for geographers, but for

all those interested in theories of space and place - whether in geography, sociology, urban studies, cultural studies, or anthropology.

Teaching To Transgress Bell Hooks 2014-03-18 First published in 1994. Routledge is an imprint of Taylor & Francis, an informa company.

The Nature of Space Milton Santos 2021-08-06 In *The Nature of Space*, pioneering Afro-Brazilian geographer Milton Santos attends to globalization writ large and how local and global orders intersect in the construction of space. Santos offers a theory of human space based on relationships between time and ontology. He argues that when geographers consider the inseparability of time and space, they can then transcend fragmented realities and partial truths without trying to theorize their way around them. Based on these premises, Santos examines the role of space, which he defines as indissoluble systems of objects and systems of actions in social processes, while providing a geographic contribution to the production of a critical social theory.

Key Thinkers on Cities Regan Koch 2017-05-22 *Key Thinkers on Cities* provides an engaging introduction to the dynamic intellectual field of urban studies. It profiles the work of 40 innovative thinkers who represent the broad reach of contemporary urban scholarship and whose ideas have shaped the way cities around the world are understood, researched, debated and acted upon. Providing a synoptic overview that spans a wide range of academic and professional disciplines, theoretical perspectives and methodological approaches, the entry for each key thinker comprises: A succinct introduction and overview Intellectual biography and research focus An explication of key ideas Contributions to urban studies The book offers a fresh look at well-known thinkers who have been foundational to urban scholarship, including Jane Jacobs, Henri Lefebvre, Manuel Castells and David Harvey. It also incorporates those who have helped to bring a concern for cities to more widespread audiences, such as Jan Gehl, Mike Davis and Enrique Peñalosa. Notably, the book also includes a range of thinkers who have more recently begun to shape the study of cities through engagements with art, architecture, computer modelling, ethnography, public health, post-colonial theory and more. With an introduction that provides a mapping of the current

transdisciplinary field, and individual entries by those currently involved in cutting edge urban research in the Global North and South, this book promises to be an essential text for anyone interested in the study of cities and urban life. It will be of use to those in the fields of anthropology, economics, geography, sociology and urban planning.

Wilfrid Sellars James O'Shea 2015-02-13 The work of the American philosopher Wilfrid Sellars continues to have a significant impact on the contemporary philosophical scene. His writings have influenced major thinkers such as Rorty, McDowell, Brandom, and Dennett, and many of Sellars basic conceptions, such as the logical space of reasons, the myth of the given, and the manifest and scientific images, have become standard philosophical terms. Often, however, recent uses of these terms do not reflect the richness or the true sense of Sellars original ideas. This book gets to the heart of Sellars philosophy and provides students with a

comprehensive critical introduction to his life's work. The book is structured around what Sellars himself regarded as the philosophers overarching task: to achieve a coherent vision of reality that will finally overcome the continuing clashes between the world as common sense takes it to be and the world as science reveals it to be. It provides a clear analysis of Sellars groundbreaking philosophy of mind, his novel theory of consciousness, his defense of scientific realism, and his thoroughgoing naturalism with a normative turn. Providing a lively examination of Sellars work through the central problem of what it means to be a human being in a scientific world, this book will be a valuable resource for all students of philosophy.

Post-structuralist Geography Jon Murdoch 2006 An introduction to post-structuralist theory that critically assesses how the concept can be used to study space and place, this text communicates a new agenda for the

study of human geography.

Globalization Andrew Jones 2010-07-13 *Globalization: Key Thinkers* offers a critical commentary on the leading thinkers in the contemporary globalization debate, as well as new arguments about the future direction of globalization thinking. The book guides the reader through the key arguments of leading thinkers, explaining their place in the wider globalization debate and evaluating their critical reception. Eleven thematic chapters focus on one or two key thinkers covering every aspect of the globalization debate including the theoretical arguments of Anthony Giddens and Manuel Castells, to the positive arguments of Thomas Friedman and Martin Wolf and the reforming ideas of Joseph Stiglitz. Other chapters variously address the ideas of Immanuel Wallerstein, Arjun Appadurai, Paul Hirst, Naomi Klein, Grahame Thompson, David Held, Anthony McGrew, Michael Hardt, Antonio Negri, Saskia Sassen and Peter Dicken. Each chapter also provides some carefully selected recommendations for further reading for the thinkers discussed. The book ends with a concluding chapter that examines how thinking about globalization is likely to develop in future. Whilst individual chapters can stand alone, the book is designed as a whole to enhance the reader's understanding of how different thinkers' ideas relate and contrast to each other.

The SAGE Handbook of Geographical Knowledge John A Agnew 2011-03-04 Broad in scope and edited by two massive names in geography, this is a critical exploration of how the field has emerged and fared over the course of its modern institutionalization.

Concentric Space as a Life Principle Beyond Schopenhauer, Nietzsche and Ricoeur Paul Downes 2019-10-02 *Concentric Space as a Life Principle beyond Schopenhauer, Nietzsche and Ricoeur* invites a fresh vision of human experience and search for life meanings in terms of potential openings through relational space. Offering a radical spatial rereading of foundational ideas of influential thinkers Schopenhauer, Nietzsche and Ricoeur, it argues that these ideas can be rethought for a more fundamental understanding of life, self and other. This book offers a radical reconceptualisation of space as an animating principle for life

through common, although previously hidden, features across the thought of Schopenhauer, Nietzsche and Ricoeur. It offers a fresh spatial interpretation of key themes in these thinkers' works, such as compassion, will to life, Dionysian rapture, will to power, selfovercoming, re-valuation of values, eternal recurrence, living metaphor and intersubjectivity. It proposes a spatial restructuring of experience from diametric spaces of exclusion towards concentric spaces of inclusion for an experiential restructuring towards unifying modes of experience. This spatial rereading of these major figures in philosophy directly challenges many previous understandings, to offer a distinctive spatial-phenomenological framework for examining a life principle. This book will appeal to academics, researchers and postgraduates engaged in the study of philosophy, wellbeing, education and human development. The book's interdisciplinary scope ensures that it is also of interest for those in the fields of psychology, anthropology, psychoanalysis and culture studies.

Space, Knowledge and Power Stuart Elden 2016-04-01 Michel Foucault's work is rich with implications and insights concerning spatiality, and has inspired many geographers and social scientists to develop these ideas in their own research. This book, the first to engage Foucault's geographies in detail from a wide range of perspectives, is framed around his discussions with the French geography journal *Hérodote* in the mid 1970s. The opening third of the book comprises some of Foucault's previously untranslated work on questions of space, a range of responses from French and English language commentators, and a newly translated essay by Claude Raffestin, a leading Swiss geographer. The rest of the book presents specially commissioned essays which examine the remarkable reception of Foucault's work in English and French language geography; situate Foucault's project historically; and provide a series of developments of his work in the contemporary contexts of power, biopolitics, governmentality and war. Contributors include a number of key figures in social/spatial theory such as David Harvey, Chris Philo, Sara Mills, Nigel Thrift, John Agnew, Thomas Flynn and Matthew Hannah. Written in an open and engaging tone, the

contributors discuss just what they find valuable - and frustrating - about Foucault's geographies. This is a book which will both surprise and challenge.
