Building a More Resilient Financial Sector

Aditya Narain 2012-04-11 The IMF, with the Bank for International Settlements and the Financial Stability Board, has been at the

forefront of discussions on reform of the global financial system to reduce the possibility of future crises, as well as to limit the consequences if they do occur. The policy choices are both urgent and challenging, and are

complicated by the relationship between sovereign debt and risks to the banking sector. Building a More Resilient Financial Sector describes the key elements of the reform agenda, including tighter regulation and more effective supervision; greater transparency to strengthen market discipline and limit incentives for risk taking; coherent mechanisms for resolution of failed institutions; and effective safety nets to limit the impact on the financial system of institutions viewed as "too big to fail." Finally, the book takes a look ahead at how the financial system is likely to be shaped by the efforts of policymakers and the private sector response.

China's Cotton Industry Björn Alpermann
2010-04-05 The cotton processing industry is a distinct sector of China's rural economy which recently underwent a momentous transition from plan to market. China is the world's largest producer as well as consumer of cotton, and cotton processing links the agricultural production of this important commodity to China's booming textile industry. Alpermann examines the political economy of the cotton processing industry, analyzes the process of cotton policy making and discusses reform outcomes on a national scale and the central

state's response. He then goes on to examine the implementation of economic transformation and institutional change in two traditional cotton-growing regions, looking at how local governments and the former monopolist cope with the changes brought about by marketization. Studying the cotton industry provides a lens through which to observe the changes in the way the state governs the economy during China's transition and helps to assess the diverging claims about the nature of the political economy in China. As such China's Cotton Industry is an essential read for anyone studying Chinese business, economics or politics.

The Foundations and Future of Financial Regulation Mads Andenas 2013-11-20 Financial regulation has entered into a new era, as many foundational economic theories and policies supporting the existing infrastructure have been and are being questioned following the financial crisis. Goodhart et al's seminal monograph "Financial Regulation: Why, How and Where Now?" (Routledge:1998) took stock of the extent of financial innovation and the maturity of the financial services industry at that time, and

mapped out a new regulatory roadmap. This book offers a timely exploration of the "Why, How and Where Now" of financial regulation in the aftermath of the crisis in order to map out the future trajectory of financial regulation in an age where financial stability is being emphasised as a key regulatory objective. The book is split into four sections: the objectives and regulatory landscape of financial regulation; the regulatory regime for investor protection; the regulatory regime for financial institutional safety and soundness; and macro-prudential regulation. The discussion ranges from theoretical and policy perspectives to comprehensive and critical consideration of financial regulation in the specifics. The focus of the book is on the substantive regulation of the UK and the EU, as critical examination is made of the unravelling and the future of financial regulation with comparative insights offered where relevant especially from the US. Running throughout the book is consideration of the relationship

between financial regulation, financial stability and the responsibility of various actors in governance. This book offers an important contribution to continuing reflections on the role of financial regulation, market discipline and corporate responsibility in the financial sector, and upon the roles of regulatory authorities, markets and firms in ensuring the financial health and security of all in the future.

published, serially, in The New Yorker in 1965. The intensively researched, atmospheric narrative of the lives of the Clutter family of Holcomb, Kansas, and of the two men, Richard Eugene Hickock and Perry Edward Smith, who brutally killed them on the night of November 15, 1959, is the seminal work of the “new journalism.” Perry Smith is one of the great dark characters of American literature, full of contradictory emotions. “I thought he was a very nice gentleman,” he says of Herb Clutter. “Soft-spoken. I thought so right up to the moment I cut his throat.” Told in chapters that alternate between the Clutter household and the approach of Smith and Hickock in their black Chevrolet, then between the investigation of the case and the killers’ flight, Capote’s account is so detailed that the reader comes to feel almost like a participant in the events.

system and its regulation have undergone exponential growth and dramatic reform over the last thirty years. This period has witnessed major developments in the nature and intensity of financial markets, as well as repeated cycles of regulatory reform and development, often linked to crisis conditions. The recent financial crisis has led to unparalleled interest in financial regulation from policymakers, economists, legal practitioners, and the academic community, and has prompted large-scale regulatory reform. The Oxford Handbook of Financial Regulation is the first comprehensive, authoritative, and state-of-the-art account of the nature of financial regulation. Written by an international team of leading scholars in the field, it takes a contextual and comparative approach to examine scholarly, policy, and regulatory developments in the past three decades. The first three Parts of the Handbook address the underpinning horizontal themes which arise in financial regulation: financial systems and regulation; the

organization of financial system regulation, including regional examples from the EU and the US; and the delivery of outcomes and regulatory techniques. The final three Parts address the major reoccurring objectives of financial regulation, widely regarded as the anchors of financial regulation internationally: financial stability; market efficiency, integrity, and transparency; and consumer protection. The Oxford Handbook of Financial Regulation will be an invaluable resource for scholars and students of financial regulation, and for economists, policy-makers and regulators.

Making Banks Safer Mr. Julian T. S. Chow
2011-10-01 This paper assesses proposals to redefine the scope of activities of systemically important financial institutions. Alongside reform of prudential regulation and oversight,

these have been offered as solutions to the too-important-to-fail problem. It is argued that while the more radical of these proposals such as narrow utility banking do not adequately address key policy objectives, two concrete policy measures - the Volcker Rule in the United States and retail ring-fencing in the United Kingdom - are more promising while still entailing significant implementation challenges. A risk factor common to all the measures is the potential for activities identified as too risky for retail banks to migrate to the unregulated parts of the financial system. Since this could lead to accumulation of systemic risk if left unchecked, it appears unlikely that any structural engineering will lessen the policing burden on prudential authorities and on the banks.

the 30 functioning multilateral development banks (MDBs). MDBs have their roots in the growing system of international finance and multilateral cooperation, with the first recognisable MDB being proposed by Latin America in financial cooperation with the US in the late 1930s. That Inter-American Bank did not eventuate but was a precursor to the World Bank being negotiated at Bretton Woods in 1944. Since then, a complex network of regional, sub-regional, and specialised development banks has progressively emerged across the globe, including two significant recent entrants established by China and the BRICS. MDBs arrange loans, credits, and guarantees for investment in member states, generally with the stated aim of fostering economic growth. They operate in both the Global North and South, though there are more MDBs focusing on emerging and developing states. While the World Bank and some of the larger regional banks have been scrutinised, little attention has

been paid to the smaller banks or the overall system. This book provides the first study of all 30 MDBs and it evaluates their interrelationships. It analyses the emergence of the MDBs in relation to geopolitics, development paradigms and debt. It includes sections on each of the banks as well as on how MDBs have approached the key sectors of infrastructure, human development, and climate. This book will be of particular interest to researchers of development finance, global governance, and international political economy.
