[Uncertainty and Global Climate Change Research](#) 1994 The Workshop on Uncertainty and Global Climate Change Research March 22--23, 1994, in Knoxville, Tennessee. This report summarizes the results and recommendations of the workshop. The purpose of the

workshop was to examine in-depth the concept of uncertainty. From an analytical point of view, uncertainty is a central feature of global climate science, economics and decision making. The magnitude and complexity of uncertainty surrounding global climate change has made it

quite difficult to answer even the most simple and important of questions-whether potentially costly action is required now to ameliorate adverse consequences of global climate change or whether delay is warranted to gain better information to reduce uncertainties. A major conclusion of the workshop is that multidisciplinary integrated assessments using decision analytic techniques as a foundation is key to addressing global change policy concerns. First, uncertainty must be dealt with explicitly and rigorously since it is and will continue to be a key feature of analysis and recommendations on policy questions for years to come. Second, key policy questions and variables need to be explicitly identified, prioritized, and their uncertainty characterized to guide the entire scientific, modeling, and policy analysis process. Multidisciplinary integrated assessment techniques and value of information methodologies are best suited

for this task. In terms of timeliness and relevance of developing and applying decision analytic techniques, the global change research and policy communities are moving rapidly toward integrated approaches to research design and policy analysis.

Laudato Si' Pope Francis 2020-10-06 Laudato Si' is Pope Francis' second encyclical which focuses on the theme of the environment. In fact, the Holy Father in his encyclical urges all men and women of good will, the rulers and all the powerful on earth to reflect deeply on the theme of the environment and the care of our planet. This is our common home, we must take care of it and love it - the Holy Father tells us - because its end is also ours.

The Emerging Global Consensus on Climate Change and Human Mobility Mostafa M Naser 2020-11-05 This book examines whether a global consensus is emerging on climate change and human mobility and presents evidence of a slow-moving but dynamic,

step-by-step process of international policy development on climate-related mobility. Naser reviews the range of solutions offered to address climate-related mobility problems, such as extending the 1951 UN Refugee Convention, adopting an additional protocol to the UNFCCC or creating a new international treaty to support those facing climate-related migration and displacement problems. He examines the accumulating stock of international policies and initiatives relevant to climate-related mobility using a framework of six policy areas: human rights, refugees, climate change, disaster risk reduction, migration, and sustainable development. He uses this framework to define and summarise the main UN actions and milestones on climate-related mobility. Despite the difficult context affecting the global community of worsening climate change impacts and human rights under threat, Naser asserts that the foundations of global

consensus on climate-related mobility have been built, particularly in the last decade. This book will be of great relevance to students, scholars and policy-makers with an interest in the increasing interface between climate change and human mobility policy issues.

The Implementation of the Paris Agreement on Climate Change Vesselin Popovski 2018-09-03 In December 2015, 196 parties to the United Nations Framework Convention on Climate Change (UNFCCC) adopted the Paris Agreement, seen as a decisive landmark for global action to stop human-induced climate change. The Paris Agreement will replace the 1997 Kyoto Protocol which expires in 2020,

and it creates legally binding obligations on the parties, based on their own bottom-up voluntary commitments to implement Nationally Determined Contributions (NDCs). The codification of the climate change regime has advanced well, but the implementation of it remains uncertain. This book focuses on the implementation prospects of the Agreement, which is a challenge for all and will require a fully comprehensive burden-sharing framework. Parties need to meet their own NDCs, but also to finance and transfer technology to others who do not have enough. How equity-based and facilitative the process will be, is of crucial importance. The volume examines a broad range of issues including the lessons that can be learnt from the implementation of previous environmental legal regimes, climate policies at national and sub-national levels and whether the implementation mechanisms in the Paris Agreement are likely to be sufficient. Written by leading

experts and practitioners, the book diagnoses the gaps and lays the ground for future exploration of implementation options. This collection will be of interest to policy-makers, academics, practitioners, students and researchers focusing on climate change governance.

El Niño 1997-1998 Stanley A. Changnon 2000-04-06 This book will cover the time span from the first indications of El Niño (May 1997) until its reversal (June 1998). The focus will be largely on the United States, where El Niño produced widespread changes in how the public perceives weather and in the accuracy of forecasts Among the key issues it will examine are how the news media interpreted and dramatized El Niño and the reaction both of the public and decision-makers (the latter based on interviews with agribusiness, utilities, water management agencies, etc.); the scientific issues emerging from the event; and the social

and economic consequences of the event. Finally, it will suggest what can and should be done when El Nino occurs in the future.

Global Trends 2040 National Intelligence Council 2021-03 "The ongoing COVID-19 pandemic marks the most significant, singular global disruption since World War II, with health, economic, political, and security implications that will ripple for years to come." -Global Trends 2040 (2021) Global Trends 2040-A More Contested World (2021), released by the US National Intelligence Council, is the latest report in its series of reports starting in 1997 about megatrends and the world's future. This report, strongly influenced by the COVID-19 pandemic, paints a bleak picture of the future and describes a contested, fragmented and turbulent world. It specifically discusses the four main trends that will shape tomorrow's world: - Demographics-by 2040, 1.4 billion people will be added mostly in Africa and South

Asia. - Economics-increased government debt and concentrated economic power will escalate problems for the poor and middleclass. - Climate-a hotter world will increase water, food, and health insecurity. - Technology-the emergence of new technologies could both solve and cause problems for human life. Students of trends, policymakers, entrepreneurs, academics, journalists and anyone eager for a glimpse into the next decades, will find this report, with colored graphs, essential reading.

GLOBAL WARMING, THE GREENHOUSE EFFECT, FOSSIL FUELS - what do they all mean? What are biodiversity and sustainable development? Who is studying the changes that are taking place here on Earth? Which sources are reliable? What action can I take? We Are All Greta sets out the basic ideas required to understand climate change, explained in a scientific and accessible way and drawn from the most authoritative sources. With a chapter on key words and sites to help you understand the climate challenge and a list of websites to visit for further information, this is a book for young people, for parents, for grandparents and anyone having to answer direct and urgent questions about what must be done to protect our world. WHAT EARLY READERS ARE SAYING ABOUT WE ARE ALL GRETA

"Very good for young & older readers. This applies to every one of us on this planet!"

"Since we have only about 12 years before climate change is irreversible, this is a very timely book. Highly recommended." "It is suitable for children and adults alike and I would recommend it to anyone wanting to learn more about global warming."

"Definitely a good place to start when teaching kids about the environment."

chapter identifies and discusses key measurements to be carried out at such supersites, with a focus on four topical subjects: the carbon, nitrogen, ozone and water budgets. This kind of holistic approach is vital to a realistic translation of the ongoing changes in climate and air quality into research on the impacts on forest ecosystems. Such an integrated effort requires a considerable use of resources at highly instrumented measurement sites and can only be achieved by building on existing infrastructures.

The Uninhabitable Earth David Wallace-Wells 2020-03-17 #1
NEW YORK TIMES
BESTSELLER • “The Uninhabitable Earth hits you like a comet, with an overflow of insanely lyrical prose about our pending Armageddon.”—Andrew Solomon, author of *The Noonday Demon* With a new afterword It is worse, much worse, than you think. If your anxiety about global warming is dominated by fears of sea-

level rise, you are barely scratching the surface of what terrors are possible—food shortages, refugee emergencies, climate wars and economic devastation. An “epoch-defining book” (The Guardian) and “this generation’s *Silent Spring*” (The Washington Post), *The Uninhabitable Earth* is both a travelogue of the near future and a meditation on how that future will look to those living through it—the ways that warming promises to transform global politics, the meaning of technology and nature in the modern world, the sustainability of capitalism and the trajectory of human progress. *The Uninhabitable Earth* is also an impassioned call to action. For just as the world was brought to the brink of catastrophe within the span of a lifetime, the responsibility to avoid it now belongs to a single generation—today’s. Praise for *The Uninhabitable Earth* “*The Uninhabitable Earth* is the most terrifying book I have ever read. Its subject is climate change, and

its method is scientific, but its mode is Old Testament. The book is a meticulously documented, white-knuckled tour through the cascading catastrophes that will soon engulf our warming planet.”—Farhad Manjoo, *The New York Times* “Riveting. . . . Some readers will find Mr. Wallace-Wells’s outline of possible futures alarmist. He is indeed alarmed. You should be, too.”—*The Economist* “Potent and evocative. . . . Wallace-Wells has resolved to offer something other than the standard narrative of climate change. . . . He avoids the ‘eerily banal language of climatology’ in favor of lush, rolling prose.”—Jennifer Szalai, *The New York Times* “The book has potential to be this generation’s *Silent Spring*.”—*The Washington Post* “*The Uninhabitable Earth*, which has become a best seller, taps into the underlying emotion of the day: fear. . . . I encourage people to read this book.”—Alan Weisman, *The New York Review of Books*

The International Climate

Change Regime Farhana Yamin 2004-12-09 This book presents a comprehensive, authoritative and independent account of the rules, institutions and procedures governing the international climate change regime. Its detailed yet user-friendly description and analysis covers the UN Framework Convention on Climate Change, the Kyoto Protocol, and all decisions taken by the Conference of the Parties up to 2003, including the landmark Marrakesh Accords. Mitigation commitments, adaptation, the flexibility mechanisms, reporting and review, compliance, education and public awareness, technology transfer, financial assistance and climate research are just some of the areas that are reviewed. The book also explains how the regime works, including a discussion of its political coalitions, institutional structure, negotiation process, administrative base, and linkages with other international regimes. In short, this book is the only current

What will happen if the world doesn't get to zero carbon emissions by 2050? You may not want to know. Luckily, Bill Gates has spent billions of dollars finding out exactly what we need to do fix it. Join him in his highly-accessible guide to getting the globe to zero

emissions by 2050. What does this SNAP Summary Include? - Synopsis of the original book - Key takeaways from each chapter - A breakdown of the five major sources of greenhouse gas emissions - Things we can do individually and collectively to halt climate change - How we can meet growing energy needs without harming the climate - Editorial Review - Background on Bill Gates About the Original Book: Bill Gates has a message for all of society: we need to get to zero emissions by 2050 or face catastrophic consequences around the globe. Increasingly severe weather, drought, famine, and the destruction of critical ecosystems—along with trillions of dollars of economic damage and millions of lives lost a year—are all things that await us if we refuse to listen. Luckily, he knows what we need to do to fix it. Gates takes the data behind every-day energy use and the science behind highly-technical energy innovations and provides an easily-accessible framework for anyone to understand the

problem and the potential solutions. For those who already knew that climate change was a problem, his book is a great introduction into where we can go from here and a great way to drive the conversation about what might work best. For anyone who is skeptical of the science behind climate change, Gates isn't here to convince you. He is here only to offer solutions to the biggest problem humanity has ever collectively faced.

poverty and addressing climate change are the two defining issues of our time. Both are essential to achieving sustainable global development. But they cannot be considered in isolation. This report brings together these two overarching objectives and explores how they can be more easily achieved if considered together. It demonstrates the urgency of efforts to reduce poverty and the vulnerability of poor people in the face of climate change. It also provides guidance on how to ensure that climate change policies contribute to poverty reduction and poverty reduction policies contribute to climate change mitigation and resilience building.--

The Political Economy of Low Carbon Resilient Development

Susannah Fisher 2016-10-04 Over the last decade, policies and financing decisions aiming to support low carbon resilient development within the least developed countries have been implemented across several regions. Some governments are steered by international frameworks, such as the UN Framework Convention on Climate Change (UNFCCC), while others take their own approach to planning and implementing climate resilient actions. Within these diverse approaches however, there are unspoken assumptions and normative assessments of what the solutions to climate change are, who the most appropriate actors are and who should benefit from these actions. This book examines the political economy dynamics or the underlying values, knowledge, discourses, resources and power relationships behind decisions that support low carbon resilient development in

the least developed countries. While much has been written on the politics of climate change, this book will focus on the political economy of national planning and the ways in which the least developed countries are moving from climate resilient planning to implementation. The book will use empirical evidence of low carbon resilient development planning in four countries: Bangladesh, Ethiopia, Rwanda and Nepal. Different approaches to low carbon resilience are critically analysed based on detailed analysis of key policy areas. This book will be of great interest to policy makers, practitioners' students and scholars of climate change and sustainable development.

migration throughout the world. This new edition presents key data and information on migration as well as thematic chapters on highly topical migration issues, and is structured to focus on two key contributions for readers: Part I: key information on migration and migrants (including migration-related statistics); and Part II: balanced, evidence-based analysis of complex and emerging migration issues.

Climate and Society Robin Leichenko 2019-06-17 This bold and important new book presents current and emerging thinking on the social dimensions of climate change. Using clear language and powerful examples, it introduces key concepts and frameworks for understanding the multifaceted connections between climate and society. Robin Leichenko and Karen O'Brien frame climate change as a social issue that calls for integrative approaches to research, policy, and action. They explore dominant and relevant discourses on the

social drivers and impacts of climate change, highlighting the important roles that worldviews and beliefs play in shaping responses to climate challenges. Situating climate change within the context of a rapidly changing world, the book demonstrates how dynamic political, economic, and environmental contexts amplify risks yet also present opportunities for transformative responses. Aimed at undergraduate students and others concerned with a critical challenge of our time, this informative and engaging book empowers readers with a range of possibilities for equitable and sustainable transformations in a changing climate.

How to Avoid a Climate Disaster Bill Gates 2021-02-23 #1 NEW YORK TIMES BEST SELLER • In this urgent, authoritative book, Bill Gates sets out a wide-ranging, practical—and accessible—plan for how the world can get to zero greenhouse gas emissions in time to avoid a climate catastrophe. Bill Gates has

spent a decade investigating the causes and effects of climate change. With the help of experts in the fields of physics, chemistry, biology, engineering, political science, and finance, he has focused on what must be done in order to stop the planet's slide to certain environmental disaster. In this book, he not only explains why we need to work toward net-zero emissions of greenhouse gases, but also details what we need to do to achieve this profoundly important goal. He gives us a clear-eyed description of the challenges we face. Drawing on his understanding of innovation and what it takes to get new ideas into the market, he describes the areas in which technology is already helping to reduce emissions, where and how the current technology can be made to function more effectively, where breakthrough technologies are needed, and who is working on these essential innovations. Finally, he lays out a concrete, practical plan for achieving the goal of zero

emissions—suggesting not only policies that governments should adopt, but what we as individuals can do to keep our government, our employers, and ourselves accountable in this crucial enterprise. As Bill Gates makes clear, achieving zero emissions will not be simple or easy to do, but if we follow the plan he sets out here, it is a goal firmly within our reach.

TIP 35: Enhancing Motivation for Change in Substance Use Disorder Treatment (Updated 2019)

U.S. Department of Health and Human Services 2019-11-19
Motivation is key to substance use behavior change.

Counselors can support clients' movement toward positive changes in their substance use by identifying and enhancing motivation that already exists. Motivational approaches are based on the principles of person-centered counseling. Counselors' use of empathy, not authority and power, is key

to enhancing clients' motivation to change. Clients are experts in their own recovery from SUDs. Counselors should engage them in collaborative partnerships. Ambivalence about change is normal. Resistance to change is an expression of ambivalence about change, not a client trait or characteristic. Confrontational approaches increase client resistance and discord in the counseling relationship. Motivational approaches explore ambivalence in a nonjudgmental and compassionate way.

Tropical Peatland Ecosystems Mitsuru Osaki
2015-12-07 This book is an excellent resource for scientists, political decision makers, and students interested in the impact of peatlands on climate change and ecosystem function, containing a plethora of recent research results such as monitoring-sensing-modeling for carbon-water flux/storage, biodiversity and peatland

management in tropical regions. It is estimated that more than 23 million hectares (62 %) of the total global tropical peatland area are located in Southeast Asia, in lowland or coastal areas of East Sumatra, Kalimantan, West Papua, Papua New Guinea, Brunei, Peninsular Malaysia, Sabah, Sarawak and Southeast Thailand. Tropical peatland has a vital carbon-water storage function and is host to a huge diversity of plant and animal species. Peatland ecosystems are extremely vulnerable to climate change and the impacts of human activities such as logging, drainage and conversion to agricultural land. In Southeast Asia, severe episodic droughts associated with the El Niño-Southern Oscillation, in combination with over-drainage, forest degradation, and land-use changes, have caused widespread peatland fires and microbial peat oxidation. Indonesia's 20 Mha peatland area is estimated to include about 45-55 GtC of carbon

*Downloaded from
meeting.uniabeu.edu.br
on 2021-10-03 by guest*

stocks. As a result of land use and development, Indonesia is the third largest emitter of greenhouse gases (2-3 Gtons carbon dioxide equivalent per year), 80 % of which is due to deforestation and peatland loss. Thus, tropical peatlands are key ecosystems in terms of the carbon-water cycle and climate change.

Migration, Environment and Climate Change

Frank Laczko
2009 Gradual and sudden environmental changes are resulting in substantial human movement and displacement, and the scale of such flows, both internal and cross-border, is expected to rise with unprecedented impacts on lives and livelihoods. Despite the potential challenge, there has been a lack of strategic thinking about this policy area partly due to a lack of data and empirical research on this topic. Adequately planning for and managing environmentally induced migration will be critical for human security. The papers in this volume were first presented at the Research

Workshop on Migration and the Environment: Developing a Global Research Agenda held in Munich, Germany in April 2008. One of the key objectives on the Munich workshop was to address the need for more sound empirical research and identify priority areas of research for policy makers in the field of migration and the environment.

There is a renaissance blooming in the climate movement: leadership that is more characteristically feminine and more faithfully feminist, rooted in compassion, connection, creativity, and collaboration. While it's clear that women and girls are vital voices and agents of change for this planet, they are too often missing from the proverbial table. More than a problem of bias, it's a dynamic that sets us up for failure. To change everything, we need everyone. *All We Can Save* illuminates the expertise and insights of dozens of diverse women leading on climate in the United States—scientists, journalists, farmers, lawyers, teachers, activists, innovators, wonks, and designers, across generations, geographies, and race—and aims to advance a more representative, nuanced, and solution-oriented public conversation on the climate crisis. These women offer a spectrum of ideas and insights for how we can rapidly, radically reshape society.

proposed by Paul Crutzen and Eugene Stoermer in their foundational 2000 paper. It undertakes a broad investigation into the ways in which science, technology, and the humanities can create a new and compelling awareness of human impacts on the environment. Using history, art, literature, religion, philosophy, ethics, and justice as the focal points, Merchant traces key figures and developments in the humanities throughout the Anthropocene era and explores how these disciplines might influence sustainability in the next century. Wide-ranging and accessible, this book from an eminent scholar in environmental history and philosophy argues for replacing the Age of the Anthropocene with a new Age of Sustainability.

Climate Change Gavin Schmidt
2009-03-24 An unprecedented union of scientific analysis and stunning photography illustrating the effects of climate change on the global ecosystem. Going beyond the

headlines, this work by leading NASA climate scientist Gavin Schmidt and master photographer Joshua Wolfe illustrates as never before the ramifications of shifting climate. Photographic spreads show retreating glaciers, sinking villages in Alaska's tundra, and drying lakes. The text follows adventurous scientists through the ice caps at the poles to the coral reefs of the tropical seas. Marshaling data spanning centuries and continents, the book sparkles with cutting-edge research and visual records, including contributions from experts on atmospheric science, oceanography, paleoclimatology, technology, politics, and the polar regions. As Jeffrey D. Sachs writes in his powerful foreword, "Climate Change is a tour de force of public education."

Climate Change Special Report (IPCC-SREX) explores the challenge of understanding and managing the risks of climate extremes to advance climate change adaptation. Extreme weather and climate events, interacting with exposed and vulnerable human and natural systems, can lead to disasters. Changes in the frequency and severity of the physical events affect disaster risk, but so do the spatially diverse and temporally dynamic patterns of exposure and vulnerability. Some types of extreme weather and climate events have increased in frequency or magnitude, but populations and assets at risk have also increased, with consequences for disaster risk. Opportunities for managing risks of weather- and climate-related disasters exist or can be developed at any scale, local to international. Prepared following strict IPCC procedures, SREX is an invaluable assessment for anyone interested in climate extremes, environmental disasters and adaptation to

climate change, including policymakers, the private sector and academic researchers.

Global Warming David Archer 2011-09-21 Archer's Global Warming: Understanding the Forecast 2nd Edition, is the first real text to present the science and policy surrounding climate change at the right level. Accompanying videos, simulations and instructional support makes it easier to build a syllabus to improve and create new material on climate change. Archer's polished writing style makes the text entertaining while the improved pedagogy helps better understand key concepts, ideas and terms. This edition has been revised and reformulated with a new chapter template of short chapter introductions, study questions at the end, and critical thinking puzzlers throughout. Also a new asset for the BCS was created that will give ideas for assignments and topics for essays and other projects. Furthermore, a number of interactive models

The Ocean and Cryosphere in a Changing Climate

Intergovernmental Panel on Climate Change (IPCC)
2022-04-30 The

Intergovernmental Panel on Climate Change (IPCC) is the leading international body for assessing the science related to climate change. It provides policymakers with regular assessments of the scientific basis of human-induced climate change, its impacts and future risks, and options for adaptation and mitigation. This IPCC Special Report on the Ocean and Cryosphere in a Changing Climate is the most comprehensive and up-to-date assessment of the observed and projected changes to the ocean and cryosphere and their associated impacts and risks, with a focus on resilience, risk management response options, and adaptation measures, considering both their potential and limitations. It brings together knowledge on physical and biogeochemical

changes, the interplay with ecosystem changes, and the implications for human communities. It serves policymakers, decision makers, stakeholders, and all interested parties with unbiased, up-to-date, policy-relevant information. This title is also available as Open Access on Cambridge Core.

The Keys to Bread and Wine
Abigail Agresta 2022-07-15

How did medieval people think about the environments in which they lived? In a world shaped by God, how did they treat environments marked by religious difference? *The Keys to Bread and Wine* explores the answers to these questions in Valencia in the later Middle Ages. When Christians conquered the city in 1238, it was already one of the richest agricultural areas in the Mediterranean thanks to a network of irrigation canals constructed under Muslim rule. Despite this constructed environment, drought, flooding, plagues, and other natural disasters continued to confront civic leaders in the

later medieval period. Abigail Agresta argues that the city's Christian rulers took a technocratic approach to environmental challenges in the fourteenth century but by the mid-fifteenth century relied increasingly on religious ritual, reflecting a dramatic transformation in the city's religious identity. Using the records of Valencia's municipal council, she traces the council's efforts to expand the region's infrastructure in response to natural disasters, while simultaneously rendering the landscape within the city walls more visibly Christian. This having been achieved, Valencia's leaders began by the mid-fifteenth century to privilege rogations and other ritual responses over infrastructure projects. But these appeals to divine aid were less about desperation than confidence in the city's Christianity. Reversing traditional narratives of technological progress, *The Keys to Bread and Wine* shows how religious concerns shaped the governance of the

environment, with far-reaching implications for the environmental and religious history of medieval Iberia.

Fairness in International Climate Change Law and Policy

Friedrich Soltau
2009-09-14 Based on an overview of science and the development of the climate regime to date, this book seeks to identify the elements of a working consensus on fairness principles that could be used to solve the hitherto intractable problem of assigning responsibility for combating climate change.

Climate Migration and Security

Ingrid Boas 2015-05-01
Climate migration, as an image of people moving due to sea-level rise and increased drought, has been presented as one of the main security risks of global warming. The rationale is that climate change will cause mass movements of climate refugees, causing tensions and even violent conflict. Through the lens of climate change politics and securitisation theory, Ingrid Boas examines how and why

climate migration has been presented in terms of security and reviews the political consequences of such framing exercises. This study is done through a macro-micro analysis and concentrates on the period of the early 2000s until the end of September 2014. The macro-level analysis provides an overview of the coalitions of states that favour or oppose security framings on climate migration. It shows how European states and the Small Island States have been key actors to present climate migration as a matter of security, while the emerging developing countries have actively opposed such a framing. The book argues that much of the division between these states alliances can be traced back to climate change politics. As a next step, the book delves into UK-India interactions to provide an in-depth analysis of these security framings and their connection with climate change politics. This micro-level analysis demonstrates how the UK has strategically used security

framings on climate migration to persuade India to commit to binding targets to reduce their greenhouse gas emissions. The book examines how and why such a strategy has emerged, and most importantly, to what extent it has been successful. Climate Migration and Security is the first book of its kind to examine the strategic usage of security arguments on climate migration as a political tool in climate change politics.

Original theoretical, empirical, and policy-related insights will provide students, scholars, and policy makers with the necessary tools to review the effectiveness of these framing strategies for the purpose of climate change diplomacy and delve into the wider implications of these framing strategies for the governance of climate change.

Geopolitics of Fear and 'Climate Change Migrations': Implications for Bangladesh and India Sonali Narang

Geopolitics, grade: PhD, Panjab University (Panjab University), language: English, abstract: The discourse of 'climate migrations' will reinforce the old borders (physical and mental) and create new 'climate borders' between India and Bangladesh. In International Relations State system is expected uphold five basic social values security, freedom, order, justice and welfare but climate change would be challenging all these social values. This work revolves around interrelated key concepts of critical geopolitics, imaginative geographies and borders in order to map out geopolitics of fear, deployed through the imaginative geographies of climate induced migrations, and analyze its implications for India and Bangladesh. This work stated that a critical social science intervention in the nascent discourse of 'climate change migration' is needed, in order to uncover and analyze the political uses and abuses of climate fear, and growing securitization and

militarization of climate change policy and responses. Far from being the problem of National Security and the state and non state actors needs to desecureitise the issue of climate induced migration and shift their attention towards the most neglected aspects of climate affair i.e. the issue climate ethics and equity. This work further explore the prospects of counter imaginative geographies of hope and the role they could possibly play in approaching the issue of climate change induced migration from the angle of human security and human rights of the socially disadvantaged, dispossessed and disadvantage in the Global South.

Climate change 2011

Climate Change and People on the Move Fanny Thornton

2018-10-24 This book applies a justice framework to analysis of the actual and potential role of international law with respect to people on the move in the context of anthropogenic climate change. That people are affected by the impacts of climate change is no longer doubted, including with implications for people movement (migration, displacement, relocation, etc.). Climate Change and People on the Move tackles unique questions concerning international responsibility for people movement arising from the inequities inherent to climate change. Corrective and distributive justice provide the analytical backbone, and are explored in a substantial theoretical chapter and then applied to subsequent contextual analysis. Corrective justice supports analysis as to whether people movement in the climate change context could be conceived or framed as harm, loss, or damage which

is compensable under international law, either through fault-centred regimes or no-fault regimes (i.e. insurance). Distributive justice supports analysis as to whether such movement could be conceived or framed as a disproportionate burden, either for those faced with movement or those faced with sheltering people on the move, from which duties of re-distribution may stem. This book contributes to the growing scholarship and analysis concerning international law or governance and people movement in response to the impacts of climate change by investigating the bounds of the law where the phenomenon is viewed as one of (in)justice.

Climate Change and Human Rights Ottavio Quirico

2015-09-07 Do anthropogenic greenhouse gas emissions affect human rights? Should fundamental rights constrain climate policies? Scientific evidence demonstrates that anthropogenic greenhouse gas emissions contribute to increasing atmospheric

temperatures, soon passing the compromising threshold of 2° C. Consequences such as Typhoon Haiyan prove that climate alteration has the potential to significantly impair basic human needs. Although the United Nations Framework Convention on Climate Change and human rights regulatory regimes have so far proceeded separately, awareness is arising about their reciprocal implications. Based on tripartite fundamental obligations, this volume explores the relationship between climate change and interdependent human rights, through the lens of an international and comparative perspective. Along the lines of the metaphor of the 'wall', the research ultimately investigates the possibility of overcoming the divide between universal rights and climate change, and underlying barriers. This book aims to be a useful resource not only for practitioners, policymakers, academics, and students in international, comparative, environmental law and politics

and human rights, but also for the wider public.
