What Video Games Have to Teach Us About Learning and Literacy. Second Edition James Paul Gee 2014-12-02 James Paul Gee begins his classic book with "I want to talk about video games--yes, even violent video games--and say some positive things about them." With this simple but explosive statement, one of America's most well-respected educators looks seriously at the good that can come from playing video games. In this revised edition of What Video Games Have to Teach Us About Learning and Literacy, new games like World of Warcraft and Half Life 2 are evaluated and theories of cognitive development are expanded. The United Nations, Peace and Security Ramesh Thakur 2006-06-08 Preventing humanitarian atrocities is becoming as important for the United Nations as dealing with inter-state war. In this book, Ramesh Thakur

examines the transformation in UN operations, analysing its changing role and structure. He asks why, when and how force may be used and argues that the growing gulf between legality and legitimacy is evidence of an eroded sense of international community. He considers the tension between the US, with its capacity to use force and project power, and the UN, as the centre of the international law enforcement system. He asserts the central importance of the rule of law and of a rules-based order focused on the UN as the foundation of a civilised system of international relations. This book will be of interest to students of the UN and international organisations in politics, law and international relations departments, as well as policymakers in the UN and other NGOs.

Plutonium and Highly Enriched Uranium, 1996 David Albright 1997 Plutonium and highly enriched uranium (HEU) are the basic materials used in nuclear weapons. Plutonium also plays an important part in the generation of nuclear electricity. Knowing how much plutonium and HEU exist, where and in which form is vital for international security and nuclear commerce. Plutonium and Highly Enriched Uranium 1996 is a thorough revision of the World Inventory of Plutonium and Highly Enriched Uranium 1992. It provides a rigorous and comprehensive assessment of the amounts of plutonium and HEU in military and civilian programmes, in nuclear and non-nuclear weapon states, and in countries seeking to acquire nuclear weapons. The capabilities that exist for producing these materials around the world are examined in depth, as are the policy issues raised by them. Containing much new information, it is indispensable to all those concerned with the great contemporary issues in international nuclear relations: arms reductions in the nuclear weapon states, nuclear proliferation, nuclear smuggling, the roles of plutonium and enriched uranium in the nuclear fuel-cycle, and the disposition of surplus weapon material.

A Framework for Assessing Effects of the Food System National Research Council 2015-06-17 How we produce and consume food has a bigger impact on Americans' well-being than any other human activity. The food industry is the largest sector of our economy; food touches everything from our health to the environment, climate change, economic inequality, and the federal budget. From the earliest developments of agriculture, a major goal has been to attain sufficient foods that provide the energy and the nutrients needed for a healthy, active life. Over time, food production, processing, marketing, and consumption have evolved and become highly complex. The challenges of improving the food system in the 21st century will require systemic approaches that take full account of social, economic, ecological, and evolutionary factors. Policy or business interventions involving a segment of the food system often have consequences beyond the original issue the intervention was meant to address. A Framework for Assessing Effects of the Food System develops an analytical framework for assessing effects associated with the ways in which food is grown, processed, distributed, marketed, retailed, and consumed in the United States. The framework will allow users to recognize effects across the full food system, consider all domains and dimensions of effects, account for systems dynamics and complexities, and choose appropriate methods for analysis. This report provides example applications of the framework based on complex questions that are currently under debate: consumption of a healthy and safe diet, food security, animal welfare, and preserving the environment and its resources. A Framework for Assessing Effects of the Food System describes the U.S. food system and provides a brief history of its evolution into the current system. This report identifies some of the real and potential implications of the current system in terms of its health, environmental, and

socioeconomic effects along with a sense for the complexities of the system, potential metrics, and some of the data needs that are required to assess the effects. The overview of the food system and the framework described in this report will be an essential resource for decision makers, researchers, and others to examine the possible impacts of alternative policies or agricultural or food processing practices.

The Promise and Limits of Private Power Richard M. Locke 2013-04-22 This book examines and evaluates various private initiatives to enforce fair labor standards within global supply chains. Using unique data (internal audit reports, and access to more than 120 supply chain factories and 700 interviews in 14 countries) from several major global brands, including NIKE, HP, and the International Labor Organization's Factory Improvement Programme in Vietnam, this book examines both the promise and the limitations of different approaches to actually improve working conditions, wages, and working hours for the millions of workers employed in today's global supply chains. Through a careful, empirically grounded analysis of these programs, this book illustrates the mix of private and public regulation needed to address these complex issues in a global economy.

The Social Question in the Twenty-First Century Jan Breman 2019-07-30 A free open access ebook is available upon publication. Learn more at www.luminoso.org. Want, disease, ignorance, squalor, and idleness: first recognized together in mid-nineteenth-century Europe, these are the focus of the Social Question. In 1942 William Beveridge called them the "giant evils" while diagnosing the crises produced by the emergence of industrial society. More recently, during the final quarter of the twentieth century, the global spread of neoliberal policies enlarged these crises so much that the Social Question has made a comeback. The Social Question in the Twenty-First Century maps out the linked crises across regions and countries and identifies the renewed and intensified Social Question as a labor issue above all. The volume includes discussions from every corner of the globe, focusing on American exceptionalism, Chinese repression, Indian exclusion, South African colonialism, democratic transitions in Eastern Europe, and other phenomena. The effects of capitalism dominating the world, the impact of the scarcity of waged work, and the degree to which the dispossessed poor bear the brunt of the crisis are all evaluated in this carefully curated volume. Both thorough and thoughtful, the book serves as collective effort to revive and reposition the Social Question, reconstructing its meaning and its politics in the world today.

Global Supply Chain Management and International Logistics Alan E. Branch 2008-12-19 The development of international trade is driven by international logistics and management and the provision of the global supply chain. The ultimate objective of global supply chain management is to link the market place, distribution network, manufacturing/processing/assembly process, and procurement activity in such a way that customers are serviced at a higher level yet lower cost. Overall this has introduced a new breed of management in a computer literate environment operating in a global infrastructure. Addressing this complex topic, Alan Branch's new book fulfills two clear objectives: to provide a concise, standard work on the subject, written in lucid language that embraces all the ingredients of a notoriously complex subject with a strategic focus to extol best practices and focus on all areas of the industrial and consumer sectors and their interface with changing international market needs. Until now, no book dedicated to international logistics and supply chain management was available. Practically-oriented, this book features numerous case studies and diagrams from logistic operators. An ideal resource for management students, academics and managers who need a succinct treatment of global operations, Branch's book skillfully illustrates his ideas in practice. It is a book which should be on the shelf of every practitioner and student of the subject.

Libraries, Telecentres, Cybercafes and Public Access to ICT: International Comparisons Gomez, Ricardo 2011-07-31 Public venues are vital to information access across the globe, yet few formal studies exist of the complex ways people in developing countries use information technologies in public access places. *Libraries, Telecentres, Cybercafes and Public Access to ICT: International Comparisons* presents groundbreaking research on the new challenges and opportunities faced by public libraries, community telecentres, and cybercafés that offer public access to computers and other information and communication technologies. Written in plain language, the book presents an in-depth analysis of the spaces that serve underserved populations, bridge "digital divides," and further social and economic development objectives, including employability. With examples and experiences from around the world, this book sheds light on a surprising and understudied facet of the digital revolution at a time when effective digital inclusion strategies are needed more than ever.

Mathematical Mindsets Jo Boaler 2015-10-12 Banish math anxiety and give students of all ages a clear roadmap to success *Mathematical Mindsets* provides practical strategies and activities to help teachers and parents show all children, even those who are convinced that they are bad at math, that they can enjoy and succeed in math. Jo Boaler—Stanford researcher, professor of math education, and expert on math learning—has studied why students don't like math and often fail in math classes. She's followed thousands of students through middle and high schools to study how they learn and to find the most effective ways to unleash the math potential in all students. There is a clear gap between what research has shown to work in teaching math and what happens in schools and at home. This book bridges that gap by turning research findings into practical activities and advice. Boaler translates Carol Dweck's concept of 'mindset' into math teaching and parenting strategies, showing how students can go from self-doubt to strong self-confidence, which is so important to math learning. Boaler reveals the steps that must be taken by schools and parents to improve math education for all. *Mathematical Mindsets: Explains how the brain processes mathematics learning Reveals how to turn mistakes and struggles into valuable learning experiences Provides examples of rich mathematical activities to replace rote learning Explains ways to give students a positive math mindset Gives examples of how assessment and grading policies need to change to support real understanding Scores of students hate and fear math, so they end up leaving school without an understanding of basic mathematical concepts. Their evasion and departure hinders math-related pathways and STEM career opportunities. Research has shown very clear methods to change this phenomena, but the information has been confined to research journals—until now. *Mathematical Mindsets* provides a proven, practical roadmap to mathematics success for any student at any age.*

The Fourth Industrial Revolution Klaus Schwab 2017-01-03 World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wear-

able sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine "smart factories" in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.

Crossing Boundaries Patrick M. Green 2014 Are there better ways to address community challenges than expending funds on international service-learning? In attempting to wed learning and service, are we exploiting the "other" for new, or recycled, aims? As these questions attest, of all types of service-learning, international service-learning (ISL) most starkly illuminates the tensions between the liberatory and

oppressive potentials of practice. This book explores the ramifications of realizing a new age of service-learning that pushes beyond single episodic course-based projects to rebalance student learning and community outcome priorities, and provides insight into what it looks like in its execution. In describing eleven international programs designed to achieve reciprocal, sustained relationships in which learning is co-created, the contributors reveal their struggles to change the balance of power relationships and move to a more transformative practice. Common themes are the developmental nature of this work; the recognition that it takes multiple attempts, often over years, for an individual or an institution to get this work even nearly right; that resolving the challenges of unequal resources, power, and privilege can never be completely erased; and that attention has to be given to the micro-level details. What emerge are seven guiding principles that define the nature of partnerships in liberatory practice, and that apply to all forms of service learning. They must be: strategic--linked to the mission and expertise of the institution; long-term; multifaceted--allowing both partners to play a multiplicity of roles; developmental in building capacities; contextualized in historic and cultural understanding; fully reciprocal; and create the potential for community-driven change. In addressing the problematic nature of ISL, and of service-learning in general, this book interrogates whether its experiences create the necessary conditions for the formation of individual values, convictions, and action; and whether their pivotal teaching and learning moments are indeed replicable and transferable across individual, institutional and even cultural contexts. Its conclusions and insights will be of intense interest to administrators and practitioners alike.

The Death and Life of Great American Cities Jane Jacobs 2016-07-20 Thirty years after its publication, *The Death and Life of Great American Cities* was described by *The New York Times* as "perhaps the most influential single work in the history of town planning....[It] can also be seen in a much larger context. It is first of all a work of literature; the descriptions of street life as a kind of ballet and the biting satirical account of traditional planning theory can still be read for pleasure even by those who long ago absorbed and appropriated the book's arguments." Jane Jacobs, an editor and writer on architecture in New York City

in the early sixties, argued that urban diversity and vitality were being destroyed by powerful architects and city planners. Rigorous, sane, and delightfully epigrammatic, Jacobs's small masterpiece is a blueprint for the humanistic management of cities. It is sensible, knowledgeable, readable, indispensable. The author has written a new foreword for this Modern Library edition.

A Taxonomy for Learning, Teaching, and Assessing Lorin W. Anderson 2001 This revision of Bloom's taxonomy is designed to help teachers understand and implement standards-based curriculums. Cognitive psychologists, curriculum specialists, teacher educators, and researchers have developed a two-dimensional framework, focusing on knowledge and cognitive processes. In combination, these two define what students are expected to learn in school. It explores curriculums from three unique perspectives--cognitive psychologists (learning emphasis), curriculum specialists and teacher educators (C & I emphasis), and measurement and assessment experts (assessment emphasis). This revisited framework allows you to connect learning in all areas of curriculum. Educators, or others interested in educational psychology or educational methods for grades K-12.

Virtual Reality Pietro Cipresso 2014-01-12 One of the most amazing capacities of the human mind is its ability to go beyond its boundaries. The well-known example of the "blind man" by Gregory Bateson helps us understand how our mind is able to expand its potentiality thanks to the use of a tool. This famous example demonstrates two specific features that characterize the relationship between the human mind and the use of tool. From a neuropsychological point of view, the tool is integrated in near space, extending it to the end point of the instrument. From a phenomenological point of view, we are present in the tool because we can use it in an intuitive way to realize our intentions. As Riva and Mantovani suggested, there is also another type of relationship between mind and technology, namely the second-order mediated action. In this case, the subject uses the body to control a distal tool that controls a different one to exert an action upon an external object. An example of a second-order mediated action is what happens with Virtual Reality (VR): I use my body to move an avatar (a distal tool) to exert an action upon an external object (a virtual environment). On one side, the outcome of this process further extends the space of action. From an experiential viewpoint, when interacting in a virtual space, we are also present in the distal virtual environment. On these theoretical bases, it is clear what makes VR development distinctively important is that it represents more than a simple technology in different domains of human society. In recent years, the field of VR has grown immensely. Practical applications for the use of this advanced technology encompasses many fields, from personnel training supported by interactive 3D images in industrial centers, to the use of interactive virtual environments for marketing purposes. One of the newest fields to benefit from the advances in VR technology is medicine and healthcare. Impressive advances in technology, coupled with a reduction in the economic costs have supported the development of more usable, useful, and accessible VR systems that can uniquely target a range of physical, psychological, and cognitive clinical targets and research questions. The aim of the book *Virtual Reality-Technologies, Medical Applications, and Challenges* is twofold: (1) to provide a critical overview of the most interesting medical applications of VR technologies and (2) to reflect on the future challenges in this growing field.

This Eighth Edition continues to focus students on two key themes that are the cornerstones of this book's success: the importance of looking at the data before beginning a hypothesis test, and the importance of knowing the relationship between the statistical test in use and the theoretical questions being asked by the experiment. New and expanded topics--reflecting the evolving realm of statistical methods--include effect size, meta-analysis, and treatment of missing data. Important Notice:
