Introduction to Graph Theory Douglas West 2017-01-03 Originally published in 2001, reissued as part of Pearson's modern classic series. *The Classical Tibetan Language* Stephan V. Beyer 1992-01-01 Among Asian languages, Tibetan is second only to Chinese in the depth of its historical record, with texts dating back as far as the eighth and ninth centuries, written in an alphabetic script that preserves the contemporaneous phonological features of the language. The Classical Tibetan Language is the first comprehensive description of the Tibetan language and is distinctive in that it treats the classical Tibetan language on its own terms rather than by means of descriptive categories appropriate to other languages, as has traditionally been the case. Beyer presents the language as a medium of literary expression with great range, power, subtlety, and humor, not as an abstract object. He also deals comprehensively with a wide variety of linguistic phenomena as they are actually encountered in the classical texts, with numerous examples of idioms, common locutions, translation devices, neologisms, and dialectal variations.

English Romantic Verse David Wright 1973-08-30 English Romantic poetry from its beginnings and its flowering to the first signs of its decadence. Nearly all the famous pièces de résistance will be found here - 'Intimations of Immortality', 'The Ancient Mariner', 'The Tyger', excerpts from 'Don Juan' - as well as some less familiar poems. As far as possible the poets are arranged in chronological order, and their poems in order of composition, beginning with eighteenth-century precursors such as Gray, Cowper, Burns and Chatterton. Naturally most space has been given over to the major Romantics - Blake, Wordsworth, Coleridge, Byron, Shelley, Clare and Keats - although their successors, poets such as Beddoes and Poe, are included too, as well as early poems by

Tennyson and Browning. In an excellent introduction David Wright discusses the Romantics as a historical phenomenon, and points out their central ideals and themes.

Teacher Research in Language Teaching Simon Borg 2013-03-28 Based on original research, this book explores the fundamental relationship between research and practice in English language teaching. *Teacher Research in Language Teaching* uses empirical evidence taken from an international survey of over 1,700 teachers and educational managers, over a period of six years. It examines their views of research, whether they read ELT research, and whether they do their own research. The author goes on to explore the process which teachers go through in learning to do research, and the research cultures within teaching institutions. The book concludes with a review of the key findings to emerge from the research and a discussion of strategies through which language teacher research engagement can be promoted more productively.

Assessing 21st Century Skills National Research Council 2011-09-16 The routine jobs of yesterday are being replaced by technology and/or

shipped off-shore. In their place, job categories that require knowledge management, abstract reasoning, and personal services seem to be growing. The modern workplace requires workers to have broad cognitive and affective skills. Often referred to as "21st century skills," these skills include being able to solve complex problems, to think critically about tasks, to effectively communicate with people from a variety of different cultures and using a variety of different techniques, to work in collaboration with others, to adapt to rapidly changing environments and conditions for performing tasks, to effectively manage one's work, and to acquire new skills and information on one's own. The National Research Council (NRC) has convened two prior workshops on the topic of 21st century skills. The first, held in 2007, was designed to examine research on the skills required for the 21st century workplace and the extent to which they are meaningfully different from earlier eras and require corresponding changes in educational experiences. The second workshop, held in 2009, was designed to explore demand for these types of skills, consider intersections between science education reform goals and 21st century skills, examine models of high-quality science instruction that may develop the skills, and consider science teacher readiness for 21st century skills. The third workshop was intended to delve more deeply into the topic of assessment. The goal for this workshop was to capitalize on the prior efforts and explore strategies for assessing the five skills identified earlier. The Committee on the Assessment of 21st Century Skills was asked to organize a workshop that reviewed the assessments and related research for each of the five skills identified at the previous workshops, with special attention to recent developments in technology-enabled assessment of critical thinking and problem-solving skills. In designing the workshop, the committee collapsed the five skills into three broad clusters as shown below: Cognitive skills: nonroutine problem solving, critical thinking, systems thinking Interpersonal skills: complex communication, social skills, team-work, cultural sensitivity, dealing with diversity Intrapersonal skills: self-management, time management, self-development, self-regulation, adaptability, executive functioning

Assessing 21st Century Skills provides an integrated summary of the presentations and discussions from both parts of the third workshop.

Psychology Classics B. F. Skinner 2013-06-27 A Psychology Classic Burrhus Frederic "B. F." Skinner ranks among the most frequently cited and influential psychologists in the history of the discipline. Building on the behaviorist theories of Ivan Pavlov and John Watson he was the first psychologist to receive a Lifetime Achievement Award from the American Psychological Association (APA.) Originally published in 1948, *Superstition in The Pigeon* is a learning theory classic. Note To Psychology Students If you ever have to do a paper, assignment or class project on the work of B. F. Skinner having access to *Superstition in The Pigeon* in full will prove invaluable. A psychology classic is by definition a must read; however, most landmark texts within the discipline remain unread by a majority of psychology students. A detailed, well written description of a classic study is fine to a point, but there is absolutely no substitute for understanding and engaging with the issues under review than by reading the authors unabridged ideas, thoughts and findings in

their entirety. Bonus Material Shortly after the publication of *Superstition in the Pigeon*, Skinner gave a detailed account of his science of behavior in a paper presented to the Midwestern Psychological Association, in Chicago. First published in 1950, the paper entitled *Are Theories of Learning Necessary?* is also presented in full. *Superstition in The Pigeon* by B. F. Skinner has been produced as part of an initiative by the website www.all-about-psychology.com to make historically important psychology publications widely available.

Environment, Ethics and Cultures Kay Stables 2015-02-27 "This collection engages environmental, ethical and cultural values perspectives to show how Design and Technology (D&T) Education actively contributes to the significant educational goal of attaining sustainable global futures. An international collection of authors representing all levels of education articulate how D&T research, curriculum theory, policy, and classroom practices can synergise to contribute positively to the education of children for sustainable global futures. The book offers a spectrum of theorised curriculum positions, political and policy analysis, and case studies of successful school practice. A key word in the title is that of contribution which is construed in several senses: first, of D&T as a vehicle for understanding the range of political and social values that arise with such a major educational challenge; second, of D&T as an agent of critical and practical action for students as global citizens; third, by taking global and multiple perspectives (rather than, say, Western or mono-cultural positions); and, fourth, by demonstrating D&T's capacities for working in holistic and integrative cross-curricular ways. The authors show how students can not only learn about their potential as humans-as-designers but can also develop designerly capacities that enable them to contribute meaningfully in practical ways to their communities and to wider society, that is, as global citizens who can apply design capability in ethical ways that are respectful of peoples, cultures and environments alike."

Look We Have Coming to Dover! Daljit Nagra 2010-12-09 *Look We Have Coming to Dover!* is the most acclaimed debut collection of poetry published in recent years, as well as one of the most relevant and accessible. Nagra, whose own parents came to England from the Punjab in the 1950s, draws on both English and Indian-English traditions to tell stories of alienation, assimilation, aspiration and love, from a stowaway's

first footprint on Dover Beach to the disenchantment of subsequent generations.

The Theory of Rings Nathan Jacobson 1943-12-31 The book is mainly concerned with the theory of rings in which both maximal and minimal conditions hold for ideals (except in the last chapter, where rings of the type of a maximal order in an algebra are considered). The central idea consists of representing rings as rings of endomorphisms of an additive group, which can be achieved by means of the regular representation.
